CHAPTER I.

NUMBER OF INHABITANTS.

Introduction.—This chapter gives the population of Vermont, by counties and minor civil divisions, as enumerated at the Thirteenth Census, taken as of April 15, 1910, with comparative statements of population where possible, and a statement and discussion for the state as a whole of the population living in urban and in rural territory. The statistics are given in detail in two general tables.

Table 1 (p. 572) shows the population of Vermont, distributed according to counties and minor civil divisions, at the last three censuses, namely, those of 1910, 1900, and 1890. The arrangement of counties and of the primary divisions in each county is alphabetical. The figures for secondary divisions are printed in italics. The changes in boundaries, name, or form of organization that have taken place since 1900 are indicated in the footnotes to the table. For changes between 1890 and 1900 reference must be made to the census report of 1900.

Table 2 (p. 574) shows all cities, towns having in 1910 over 2,500 inhabitants, and incorporated villages in Vermont, alphabetically arranged, with their population in 1910, 1900, and 1890. For incorporated villages there is given in each case, in addition to the county, the name of the town in which it is located and of which it forms a part.

The population of Vermont, by counties, at each of the last five censuses, from 1870 to 1910 inclusive; the increase during the last two decades; the density of population at the census of 1910; and the distribution of the population at the last two censuses according to urban and rural districts, are given in Table I of Chapter 2.

The tables and text of the present chapter contain few technical expressions whose meaning is not apparent. The census usage in regard to certain terms is explained in paragraphs following.

HISTORICAL NOTE.—The name Vermont is of French origin and signifies "green mountain."

The first visit by white men to the territory now covered by this state was probably made in 1609, when the French explorer, Samuel de Champlain, discovered the lake which bears his name. The first permanent white settlement was founded in 1724, when the English built Fort Dummer near the present site of Brattleboro.

The territory now embraced within the limits of Vermont was included in the grants conveyed by the first charter of Virginia, 1606, the charter of New England, 1620, and the royal grants of 1664 and 1674 to the Duke of York. Until 1740 a considerable portion of what is now Vermont had been claimed by the Massachusetts colony, under the terms of the charter of 1629, which granted it all the lands lying "within the space of three English miles to the northward of the * * * Merri-mac, or to the northward of any and every part thereof," and extending westward to the Pacific; but in 1740 the present northern boundary of Massachusetts was established by royal decree.

For some years prior to 1764 New Hampshire contested the claim of New York to the territory west of the Connecticut River, on the grounds that the charters of

Density of population.—The density of population of a state or county is obtained by dividing its total population by the number of square miles in its land area.

Minor civil divisions.—The counties are divided generally into smaller political units which bear different designations in the different parts of the country, such as towns, townships, election precincts, etc. Of these minor civil divisions those which rank next to the county as geographic areas are termed primary divisions. In many instances, however, these primary divisions contain political units of still smaller area, such as incorporated villages or boroughs. These smaller political units are referred to as secondary divisions.

Urban and rural population defined.—The Census Bureau, for purposes of discussion, has defined urban population as that residing in cities and other incorporated places of 2,500 inhabitants or more. In the New England States, in addition to cities having this population, all towns having a population of over 2,500 inhabitants have also been classed as urban, without regard to the population of the villages (whether incorporated as such or not) which they may contain. The result is that the "urban areas" in New England include some population which in other sections of the United States would be segregated as "rural." This departure from the general rule, rendered necessary by local conditions in New England, probably makes no great change in the proportions of urban and rural in those sections where population is dense and generally devoted to manufacturing. In other sections a considerable variation doubtless results, but there is no reason to suppose that it materially affects the distinguishing characteristics of urban and rural population as defined by census statistics.

Urban population being thus defined, the remainder of the state or county is classed as rural. In the New England States, therefore, the rural population consists of the population outside of towns and cities having over 2,500 inhabitants.

The comparisons of the urban and rural population in 1910 with that at earlier enumerations may be made either with respect to the varying proportions of the two classes at successive enumerations or with respect to the increase between enumerations. In order to contrast the *proportion* of the total population living in urban or rural territory at the census of 1910 with the proportion urban or rural at the preceding census, it is necessary to classify the territory according to the conditions as *they existed* at each census. In this comparison a place having less than 2,500 inhabitants in 1900 and over 2,500 in 1910 is classed with the rural population for 1900 and with the urban for 1910. On the other hand, in order to present fairly the contrast between urban and rural communities, as regards their *rate of growth*, it is necessary to consider the changes

1664 and 1674 were obsolete, and that, Massachusetts and Connecticut having been allowed to extend their boundaries westward to within about 20 miles of the Hudson, New Hampshire should be given the same privilege. The original grant of New Hampshire had not included the territory in dispute, and in 1764 the claim of New York was sustained by royal decree. Nevertheless, the "New Hampshire Grants," as the country west of the Connecticut was then called, remained in dispute between New Hampshire and New York until the outbreak of the Revolution.

In January, 1777, a convention at Westminster declared the Grants an independent state with the name New Connecticut. In June, at an adjourned session, the present name was adopted, and in July, at a third session, the constitution was drafted.

Vermont continued an independent republic until March, 1791. At that date it became a member of the Union, being the first state admitted after the adoption of the Constitution by the original thirteen states.

In 1781 Vermont had laid claim to territory extending westward to the Hudson and a line drawn due north from the source of that river to the international line, but in 1790 its boundaries were established substantially as they now exist.

in population for the *same* territory which have occurred from one decennial census to another. For this purpose the territory which in 1910 was urban or rural, as the case may be, is taken as the basis, and the population in 1900 for the same territory (so far as separately reported at that census) is presented, even though part of the territory may, on the basis of its population at the earlier census,

have then been in a different class. This avoids the disturbing effect on comparisons which would arise from the passage, for example, of communities formerly classed as rural into the urban group. These two distinct forms of comparison are made in Table I of Chapter 2 for the state as a whole and for each county separately for the last two censuses.

TOTAL POPULATION, INCREASE, AND DISTRIBUTION.

Population of the state.—The population of Vermont is 355,956. Compared with a population of 343,641 in 1900, this represents an increase during the past decade of 12,315, or 3.6 per cent. During the same period the total population of the United States increased 21 per cent. The percentage of increase for the state during this decade, though

comparatively small, is larger than that shown by any census since 1870.

The following table shows the population of Vermont at each census from 1790 to 1910, inclusive, together with the increase and per cent of increase during each decade, in comparison with the per cent of increase for the United States as a whole.

CENSUS YEAR.	Population.	INCREASE OVER PRECEDING CENSUS		Per cent of increase for the United States.
		Number.	Per cent.	
1910.....	355,956	12,315	3.6	21.0
1900.....	343,641	11,219	3.4	20.7
1890.....	332,422	136	(¹)	25.5
1880.....	332,286	1,735	0.5	30.1
1870.....	330,551	15,453	4.9	22.6
1860.....	315,098	978	0.3	35.6
1850.....	314,120	22,172	7.6	35.9
1840.....	291,948	11,296	4.0	32.7
1830.....	280,652	44,671	18.9	33.5
1820.....	235,981	18,086	8.3	33.1
1810.....	217,895	63,430	41.1	36.4
1800.....	154,465	69,040	80.8	35.1
1790.....	85,425			

¹ Less than one-tenth of 1 per cent.

It will be noticed from this table that for the early censuses there was a very rapid rate of growth in this state. During the 20 years from 1790 to 1810 the absolute increase in population was 132,470, while during the century which has elapsed since 1810 the increase has been only 138,061. Between 1810 and 1850 the increase in population was 96,225, or 44.2 per cent; since 1850 the increase has been 41,836, or 13.3 per cent. The increase in the six decades has not been evenly distributed, as in three of them the absolute increase was less than 2,000 persons, and the relative increase for each of these three decades was less than 1 per cent.

A comparison of the rates of increase for the state with those for the United States, as given in the preceding table, shows that the increase for the whole country during the decade from 1900 to 1910 was almost six times the rate of increase for the state; and that at every census since 1810 the rate of growth for the state has been much lower than for the country as a whole. The population of the state in 1910 is a little more than four times as large as in 1790, when the First Census was taken, while the population of the United States in 1910 is more than twenty-three times that in 1790.

When the First Census was taken, in 1790, Vermont had 8.5 per cent of the total population of New England, which was 1,009,408. In 1810 the New England States contained 1,471,973 inhabitants and Vermont's proportion, after 20 years of rapid growth, was 14.8 per cent. A hundred years later, in 1910, in an aggregate population of 6,552,681 in the New England States, Vermont was represented by 5.4 per cent of the whole. In the years that have elapsed since the First Census was taken, the population of the New England States has multiplied more than six times, while that of Vermont has multiplied only a little more than four times.

The net growth in the population of a state depends not only upon how many persons are born in it, but also how many of them remain there, and how many come in from other places. Migration modifies the rate of increase which would otherwise prevail, and while some states gain others lose by this shifting of the population. Vermont is one of the states which has lost heavily by migration.

Principal cities.—Vermont has 6 cities, of which the largest, Burlington, has a population of 20,468, and the smallest, Vergennes, a population of 1,483. The aggregate population of the 6 cities is 60,468, or 17 per cent of the total population of the state.

The table below shows the population of the 5 cities having in 1910 over 5,000 inhabitants, as reported at each census since their incorporation (or in the case of Montpelier since its organization as a town), so far as figures are available, together with the increase during each decade.

Of the cities included in the table, Barre shows the highest percentage of increase during the last decade, namely, 27.1 per cent, and St. Albans the lowest, 2.3 per cent.

CITY AND CENSUS YEAR.	Population.	INCREASE OVER PRECEDING CENSUS. ¹

1900	6,239		

¹ A minus sign (-) denotes decrease.

² Not returned separately.

Counties.—Vermont has 14 counties. The population of these counties ranges from 48,139 in Rutland County to 3,761 in Grand Isle County.

There have been no changes in the territorial boundaries of the counties since 1900.

Eight counties have increased in population during the last decade, the percentages of increase ranging from 1 per cent in Windham County to 13.9 per cent in Washington County; the absolute increase ranging from 272 in Windham County to 5,095 in Washington County. Six counties show a larger percentage of increase than is shown for the state as a whole, which, as before stated, was 3.6 per cent. Six counties have decreased in population during the last decade, the percentages of decrease ranging from 1.1 per cent in Franklin County to 15.7 per cent in Grand Isle County. The aggregate increase of population in the 8 counties that show an increase was 16,859; the aggregate decrease of population in the 6 counties that show a decrease was 4,544. The difference, 12,315, is, of course, the total increase of population in the state.

A map on page 571 shows the increase or decrease in the total population of the counties of Vermont during the last decade. In the counties shown in white the population decreased; for the other counties the different rates of increase are indicated by differences in shading.

Density of population.—The total land area of the state is 9,124 square miles. The average number of persons to the square mile in 1910 was 39; in 1900 and 1890 it was 37.7 and 36.4, respectively. The average number per square mile for the United States as a whole in 1910 was 30.9.

The density of population is given by counties in Table I of Chapter 2 and in a map on page 571.

Windsor County, with 948 square miles, has the largest area, and Grand Isle County, with 83 square miles, has the smallest area. Chittenden County has the highest density of any county, namely, 78.2 persons per square mile, while Essex County has the lowest, namely, 11.6.

Minor civil divisions.—The political divisions into which counties are subdivided are collectively termed "Minor civil divisions." In Vermont the counties are divided into 254 primary divisions, comprising 240 towns, 6 cities, 3 unorganized townships, 4 gores, and 1 grant. One of the gores, for which no population has been reported at the last three censuses, is not shown in Table 1. There are also 56 secondary divisions, all of which are villages. These incorporated villages, under the laws of Vermont, are not independent minor civil divisions, but form parts of the towns in which they are located.

Cities and villages.—In addition to the 6 cities already mentioned, Vermont contains 56 communities incorporated as villages. Nine of the incorporated villages had in 1910 a population of more than 2,500 inhabitants, with a combined population of 39,932; while 47 villages had less than 2,500 inhabitants, with a combined population of 44,072. The aggregate population of the 56 villages of the state was therefore 84,004, or 23.6 per cent of the total population of the state.

The 62 places having in 1910 either the city or the village form of incorporation had an aggregate population of 144,472, or 40.6 per cent of the total population of the state. Of these cities and villages, 14 have either been incorporated since the census of 1900 or were not returned separately at that census. The population in 1910 of the 48 cities and incorporated villages for which the population was returned separately in 1900 was 134,388, or 37.8 per cent of the population of the state. Ten years before, in 1900, these 48 cities and villages had a population of 115,761, or 33.7 per cent of the population of the state at that time.

This represents an increase during the decade of 18,627, or 16.1 per cent. Outside these cities and villages the population decreased 6,312, or 2.8 per cent.

Urban and rural population compared.—The following table presents the population of Vermont at the censuses of 1910, 1900, and 1890, respectively, dis-

tributed among cities and towns grouped according to specified limits of population, together with the percentage of the total population contained in each group at each of the censuses named. The classification is based upon the population of each place as it existed at each census.

CLASS OF PLACES.	1910		1900		1890		PER CENT OF TOTAL POPULATION.

Towns of less than 2,500 inhabitants ¹	214	186,765	218	204,340	219	215,149	52.5	59.5	64.7
Other rural territory ²	8	248	8	121	6	210	0.1	(³)	0.1

¹ Includes Vergennes city.

² Includes townships, gorges, and grants.

³ Less than one-tenth of 1 per cent.

A comparison of the figures for 1910 and 1890, as given in this table, shows an increase in the proportion of the population in each of the urban groups and a decrease in the proportion in rural territory.

The urban territory of the state in 1910—that is, the cities and towns of 2,500 inhabitants or more—contained 168,943 inhabitants, or 47.5 per cent of the total population, while 187,013 inhabitants, or 52.5 per cent, lived in rural territory. The urban territory as it existed in 1900—that is, the cities and towns then having 2,500 inhabitants or more—contained 139,180 inhabitants, or 40.5 per cent of the total population, while 204,461 inhabitants, or 59.5 per cent, lived in rural territory. There has thus been a considerable increase in the proportion of urban population. For the United States as a whole the urban population constituted 46.3 per cent of the total population in 1910 and 40.5 per cent of the total population in 1900. Table I of Chapter 2 shows 12 counties having a larger proportion of urban population in 1910 than 1900, while 2 counties are wholly rural.

In order to compare the *rate of growth* in urban and rural communities it is necessary in each case, as previously explained, to consider the changes in population which have occurred in the *same* territory from one decennial census to another. With this end in view, places classed as urban or rural according to their population in 1910 are taken as a basis and the aggregate population in 1910 and in 1900 of the same places is then compared. Thus, as shown in the next table, the total population in 1910 of those cities and towns which at that time had over 2,500 population was 168,943; in 1900 the total population of these same places (so far as separately reported) was 148,406. It may be noted that the latter figure exceeds the total population in 1900 of those places which at that

time had over 2,500 each, 139,180 (see table above), by 9,226. The difference is the result of the passage, between 1900 and 1910, of certain communities from the rural to the urban class.

In the following table the population for the state as a whole is distributed so as to show, for 1910 and 1900, the combined population of cities and towns having in 1910 2,500 inhabitants or more and the population of the remainder of the state.

CLASS OF PLACES.	POPULATION.		INCREASE: ¹ 1900-1910	
	1910	1900	Number.	Per cent.
The state.....	355,956	343,041	12,315	3.6
Cities and towns of 2,500 inhabitants or more in 1910.....	168,943	148,406	20,537	13.8
Remainder of the state.....	187,013	195,235	-8,222	-4.2

¹ A minus sign (—) denotes decrease.

The comparison of the total population in 1910 of places having a population of not less than 2,500 each with the total population of the same places in 1900, as given in the table above, shows an increase of 13.8 per cent. This represents the rate of growth of urban communities as thus defined. During the same period the rural population, comprising the remainder of the state, decreased 4.2 per cent. The population of urban areas thus increased nearly four times as rapidly as the state as a whole, while the population of rural territory decreased. For the United States as a whole urban population increased 34.9 per cent in the last decade and rural population 11.2 per cent. As shown by Table I of Chapter 2, there were 12 counties in Vermont in which the population living in rural territory decreased and 1 county in which there was a decrease in urban population.

INCREASE AND DENSITY OF POPULATION OF VERMONT, BY COUNTIES: 1910.

In case of decrease the per cent is inserted under the county name.

INCREASE OF POPULATION.

CHAPTER 2.

COMPOSITION AND CHARACTERISTICS OF THE POPULATION.

Introduction.—The first chapter having given the number of inhabitants of Vermont by counties and minor civil divisions, the decennial increase and the density of population, and the proportions urban and rural, the present chapter deals with the composition and characteristics of the population. The two chapters cover all the principal topics of the population census except occupations and ownership of homes.

Description of the tables.—The greater part of this chapter consists of three general tables, which present statistics of color, nativity, parentage, sex, citizenship, illiteracy, school attendance, and dwellings and families, as follows: Table I for the state and counties; Table II for cities of over 10,000; and Table III for places of 2,500 to 10,000.

A series of summary tables (numbered 1 to 11) reproduces from the general tables the more important state totals, and presents also certain additional data relative to state of birth, age, and marital condition.

On account of the wide differences in characteristics among the different classes of the population, the statistics on each subject are shown according to race, and for the whites according to nativity and parentage. Classification according to nativity and parentage is scarcely necessary for the other races, since nearly all negroes and Indians are native born of native parentage, and nearly all Chinese and Japanese either foreign born or of foreign parentage.

The white population is divided into four groups: (1) Native, native parentage—that is, having both parents born in the United States; (2) native, foreign parentage—having both parents born abroad; (3) native, mixed parentage—having one parent native and the other foreign born; (4) foreign born. As the second and third classes do not differ greatly in characteristics, they are combined in some of the tables; in a few cases all three native white classes are combined.

Since marked differences often exist between urban and rural communities with respect to the composition and characteristics of the population, it is desirable that the two classes be distinguished in presenting census data. The Bureau of the Census has undertaken to do this by classifying as urban the population of all incorporated places of 2,500 inhabitants or more. In New England, however, where many villages of considerable size are not separately incorporated, it was deemed best to classify also towns of 2,500 inhabitants or more as urban, although this classification is not very satisfactory because such towns generally include more or less population that is essentially rural.

The census inquiry as to school attendance was merely as to whether the person enumerated had attended any kind of school at any time between September 1, 1909, and the date of enumeration, April 15, 1910.

The Census Bureau classifies as illiterate any person 10 years of age or over who is unable to write, regardless of ability to read.

Color and nativity (Table 1).—Of the total population of Vermont, 229,382, or 64.4 per cent, are native whites of native parentage; 75,055, or 21.1 per cent, are native whites of foreign or mixed parentage; 49,861, or 14 per cent, are foreign-born whites; and 1,621, or 0.5 per cent, are negroes. The corresponding percentages in 1900 were 65.6, 21.1, 13, and 0.2, respectively, the comparison indicating very slight changes in the color, nativity, and parentage composition of the population. By counties, the proportion of whites of foreign birth ranges from 5.9 per cent in Addison to 21.6 in Essex; and the proportion of native whites of foreign or mixed parentage, from 11.5 per cent in Orange to 28.3 in Chittenden and Essex. (See maps on page 587.) In five counties more than three-fourths of the population are native whites of native parentage, and in two, Lamoille and Orange, more than four-fifths.

Of the urban population, 54.3 per cent are native whites of native parentage; of the rural, 73.6 per cent. The corresponding proportions for native whites of foreign or mixed parentage are 25.7 and 16.9 per cent, respectively. The percentage of foreign-born whites is 19.2 in the urban population and 9.4 in the rural; the percentage of negroes is 0.8 in the urban and 0.4 in the rural.

Sex (Table 2).—In the total population of the state there are 182,568 males and 173,388 females, or 105.3 males to 100 females. In 1900 the ratio was 103.9 to 100. Among native whites the ratio is 101.6 to 100; among foreign-born whites, 127.3. The urban population is about equally divided between the sexes, while in the rural there are 110.3 males to 100 females.

State of birth (Tables 3 and 4).—Of the total native population—that is, population born in the United States—81.8 per cent were born in Vermont and 18.2 per cent outside the state; of the native white population, 17.9 per cent were born outside the state, and of the native negro, 72.4 per cent. Persons born outside the state constitute a larger proportion of the native population in urban than in rural communities.

Foreign nationalities (Table 5).—Of the foreign-born white population of Vermont, persons born in Canada represent 52.3 per cent (those of French parentage, 29.4, and all other, 22.9); Ireland, 9.9; Italy, 9.2; Scotland, 5.2; England, 4.9; Russia, 4.9; Sweden, 2.7; Austria, 2.2; Wales, 2.1; Germany, 1.6; Hun-

gary, 1.1; all other countries, 3.8 per cent. Of the total white stock of foreign origin, which includes persons born abroad and also natives having one or both parents born abroad, Canada contributed 54.4 per cent (French stock, 32.4, and all other, 22); Ireland, 15.7; Italy, 5.3; England, 5.1; Scotland, 4.3; Russia, 2.9; Sweden, 1.9; Wales, 1.8; Germany, 1.7; Austria, 1.2; Hungary, 0.5 per cent.

Voting and militia ages (Table 6).—The total number of males 21 years of age and over is 113,506, representing 31.9 per cent of the population. Of such males, 61.1 per cent are native whites of native parentage, 17.1 per cent native whites of foreign or mixed parentage, 20.9 per cent foreign-born whites, and 0.9 per cent negroes. Of the 23,759 foreign-born white males of voting age, 10,811, or 45.5 per cent, are naturalized. Males of militia age—18 to 44—number 73,685.

Age (Tables 7 and 8).—Of the total population, 9.6 per cent are under 5 years of age, 18 per cent from 5 to 14 years, inclusive, 16.9 per cent from 15 to 24, 28.4 per cent from 25 to 44, and 27 per cent 45 years of age and over. The foreign-born white population comprises comparatively few children, only 7.8 per cent of this class being under 15 years of age, while more than three-fourths (76.9 per cent) are 25 years of age and over. Of the native whites of foreign or mixed parentage, less than half (46.8 per cent) are 25 and over and of the native whites of native parentage only a little more than half (53.7 per cent).

As compared with the rural, the urban population shows a larger proportion of persons in the prime of life, 30.6 per cent of the urban population being from 25 to 44 years of age, and 26.6 per cent of the rural.

School attendance (Table 9).—The total number of persons of school age—that is, from 6 to 20 years, inclusive—is 94,701, of whom 66,845, or 70.6 per cent, attended school. In addition to these, 2,768 persons under 6 and 918 of 21 and over attended school. For boys from 6 to 20 years, inclusive, the percentage attending school was 69.2; for girls, 72. For children from 6 to 14 years, inclusive, the percentage attending school was 92.9. The percentage for children of this age among native whites of native parentage was 93.1; among native whites of foreign or mixed parentage, 93.3; among foreign-born whites, 89.3; among negroes, 87.6. (See Table I.) There is little difference between urban and rural communities as regards the percentage of school attendance, the percentage being slightly higher in the urban for those from 6 to 14 years of age and in the rural for those from 15 to 20 years.

Illiteracy (Table 10).—There are 10,806 illiterates in the state, representing 3.7 per cent of the total population 10 years of age and over, as compared with 5.8 per cent in 1900. The percentage of illiteracy is 13.1 among foreign-born whites, 1.9 among native whites, and 4.8 among negroes.

For all classes combined, the percentage of illiterates is slightly higher in urban than in rural population, 3.9 as compared with 3.6, but for each class separately the percentage is higher in the rural.

For persons from 10 to 20 years of age, inclusive, whose literacy depends largely upon present school facilities and school attendance, the percentage of illiteracy is very slight (1.0). (See Table I.)

Marital condition (Table 11).—In the population 15 years of age and over, 34.3 per cent of the males are single and 26.4 per cent of the females. The percentage married is 58.5 for males and 60.6 for females, and the percentage widowed 6.2 and 12.2, respectively. The percentages of those reported as divorced, 0.9 and 0.8, respectively, are believed to be too small, because of the probability that many divorced persons class themselves as single or widowed.

That the percentage single is so much smaller for women than for men is due largely to the fact that women marry younger. Thus 9.9 per cent of the females from 15 to 19 years of age are married, as compared with 0.8 per cent of the males; and 49 per cent of the females from 20 to 24 years are married, as compared with 22.1 per cent of the males. In the next age group, 25 to 34 years, the difference is not so great, the percentages being 75.3 for females and 62.7 for males, while in the age group 35 to 44 the difference practically disappears. That there is a larger proportion of widows than of widowers may indicate that men more often remarry than women, but, since husbands are generally older than their wives, the marriage relationship is more often broken by death of the husband than by death of the wife.

For the main elements of the population the percentages of married persons among those 15 years of age and over are as follows: Foreign-born whites, 63.6 for males and 68.6 for females; native whites of native parentage, 58.8 and 59.6, respectively; native whites of foreign or mixed parentage, 53.5 and 57.3, respectively; negroes, 23.5 for males and 62.2 for females.

These percentages by no means indicate the relative tendency of the several classes as regards marriage. To determine that, the comparison should be made by age periods, since the proportion married in any class is determined largely by the proportion who have reached the marrying age. Similarly, the proportion widowed depends largely on the proportion past middle life. The percentage married is slightly higher for males, and decidedly higher for females, in rural than in urban communities.

Dwellings and families.—The total number of dwellings in Vermont is 77,466, and the total number of families 85,178, there being 109.9 families to each 100 dwellings. (See Table I.) The average number of persons per dwelling is 4.6, and the average number per family, 4.2.

PROPORTION OF FOREIGN-BORN WHITE AND NATIVE WHITE OF FOREIGN OR MIXED PARENTAGE OF VERMONT, BY COUNTIES: 1910.

PER CENT OF FOREIGN-BORN WHITE IN TOTAL POPULATION.

PER CENT OF NATIVE WHITE OF FOREIGN OR MIXED PARENTAGE IN TOTAL POPULATION.

-  Less than 5 per cent.
-  5 to 10 per cent.
-  10 to 15 per cent.
-  15 to 25 per cent.
-  25 to 35 per cent.
-  35 to 50 per cent.
-  50 per cent and over.

CHAPTER 3.

STATISTICS OF AGRICULTURE FOR THE STATE AND ITS COUNTIES.

Introduction.—This chapter presents a complete statement of the statistics of agriculture for Vermont collected at the census of 1910. Statistics of farms and farm property relate to April 15, 1910; those of farm products, expenses, and receipts are for the calendar year 1909.

Definitions.—To assist in securing comparability for its statistics of agriculture, the Bureau of the Census provided the enumerators with certain definitions and instructions, the more important of which were essentially as given below.

Farm.—A "farm" for census purposes is all the land which is directly farmed by one person managing and conducting agricultural operations, either by his own labor alone or with the assistance of members of his household or hired employees. The term "agricultural operations" is used as a general term referring to the work of growing crops, producing other agricultural products, and raising animals, fowls, and bees. A "farm" as thus defined may consist of a single tract of land, or of a number of separate and distinct tracts, and these several tracts may be held under different tenures, as where one tract is owned by the farmer and another tract is hired by him. Further, when a landowner has one or more tenants, renters, croppers, or managers, the land operated by each is considered a "farm."

In applying the foregoing definition of a "farm" for census purposes, enumerators were instructed to report as a "farm" any tract of 3 or more acres used for agricultural purposes, and also any tract containing less than 3 acres which produced at least \$250 worth of farm products in the year 1909.

Farmer.—A "farmer" or "farm operator," according to the census definition, is a person who directs the operations of a farm. Hence owners of farms who do not themselves direct the farm operations are not reported as "farmers." Farmers are divided by the Bureau of the Census into three general classes according to the character of their tenure, namely, owners, tenants, and managers.

Farm owners include (1) farmers operating their own land only, and (2) those operating both their own land and some land hired from others. The latter are sometimes referred to in the census reports as "part owners," the term "owners" being then restricted to those owning all their land.

Farm tenants are farmers who, as tenants, renters, or croppers, operate hired land only. They were reported in 1910 in three classes: (1) *Share tenants*—those who pay a certain share of the products, as one-half, one-third, or one-quarter; (2) *share-cash tenants*—those who pay a share of the products for part of the land rented by them and cash for part; and (3) *cash tenants*—those who pay a cash rental or a stated amount of labor or products, such as \$7, 10 bushels of wheat, or 100 pounds of seed cotton per acre.

Managers are farmers who are conducting farm operations for the owner for wages or a salary.

Farm land.—Farm land is divided into (1) improved land, (2) woodland, and (3) all other unimproved land. The same classification was followed in 1880. At former censuses, except that of 1880, farm land was divided into improved land and unimproved land, woodland being included with unimproved land. *Improved*

land includes all land regularly tilled or mowed, land pastured and cropped in rotation, land lying fallow, land in gardens, orchards, vineyards, and nurseries, and land occupied by farm buildings. *Woodland* includes all land covered with natural or planted forest trees, which produce, or later may produce, firewood or other forest products. *All other unimproved land* includes brush land, rough or stony land, swamp land, and any other land which is not improved or in forest. The census classification of farm land as "improved land," "woodland," and "other unimproved land" is one not always easy for the farmers or enumerators to make and the statistics therefore must be considered at best only a close approximation.

Total value of farm products.—No attempt has been made at this census to compute or even to estimate approximately the total value of farm products. Among the numerous difficulties which stand in the way of obtaining a total which would be at once comprehensive, free from duplication, and confined exclusively to the products of a definite period of time are the following:

(1) The duplication resulting from the feeding of farm crops to farm live stock, when the value both of the products derived from such live stock and of the crops are included in the same total. In 1900 an attempt was made to eliminate this duplication by means of an inquiry as to the total value of the products of each farm fed to the live stock on that farm, but, aside from the fact that this would not eliminate the duplication where the products of one farm are fed to the live stock of another farm, it is believed that the farmers were unable to make even approximately accurate answers to the inquiry, and it was accordingly not included in the schedule for 1910.

(2) The fact that farmers may buy domestic animals during the census year which are subsequently sold or slaughtered during the same year, and that it is impossible to eliminate the duplication accurately; and the further fact that the value of domestic animals sold or slaughtered, or of forest products cut, during a given year (as well as some other minor items) does not usually represent a value created wholly during that year, and that it is quite impossible to ascertain the value created during the year.

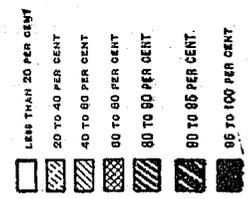

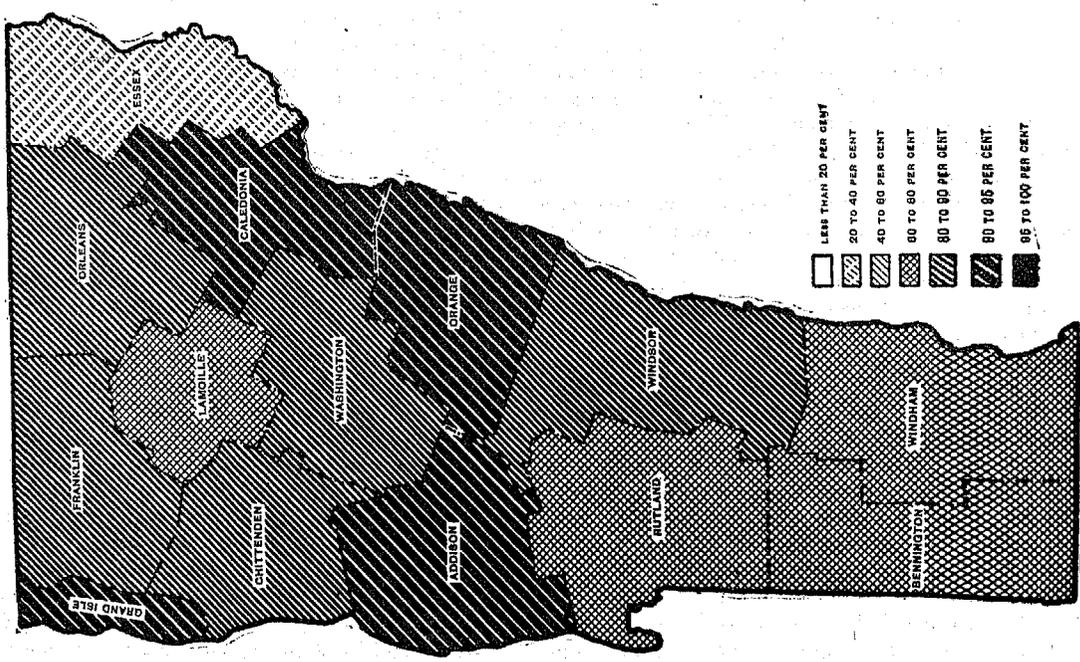

(3) The fact that the returns for some products are incomplete. The returns for all products are to a considerable extent estimates made by the farmers. Special difficulty was encountered in cases where the person in possession of the farm in April, 1910, when the census was taken, was not in possession of it during the crop year 1909. In such cases the farmer was not always able to report completely and accurately the products of the land for the preceding year. It is probable that the returns for the principal crops are in general fairly accurate, but that those for minor crops and for dairy and poultry products are frequently understatements, particularly because the home consumption was disregarded or underestimated. In the belief that no accurate result could be obtained from such an inquiry, the Bureau of the Census did not even attempt to ascertain the total quantity and value of certain by-products, such as straw and cornstalks, which are of considerable importance, the schedule calling only for the value of such by-products sold.

PER CENT OF LAND AREA IN FARMS, AND AVERAGE VALUE OF FARM LAND PER ACRE, IN VERMONT, BY COUNTIES: 1910.

PER CENT OF LAND AREA IN FARMS.

[Per cent for the state, 79.9.]

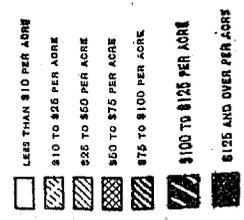

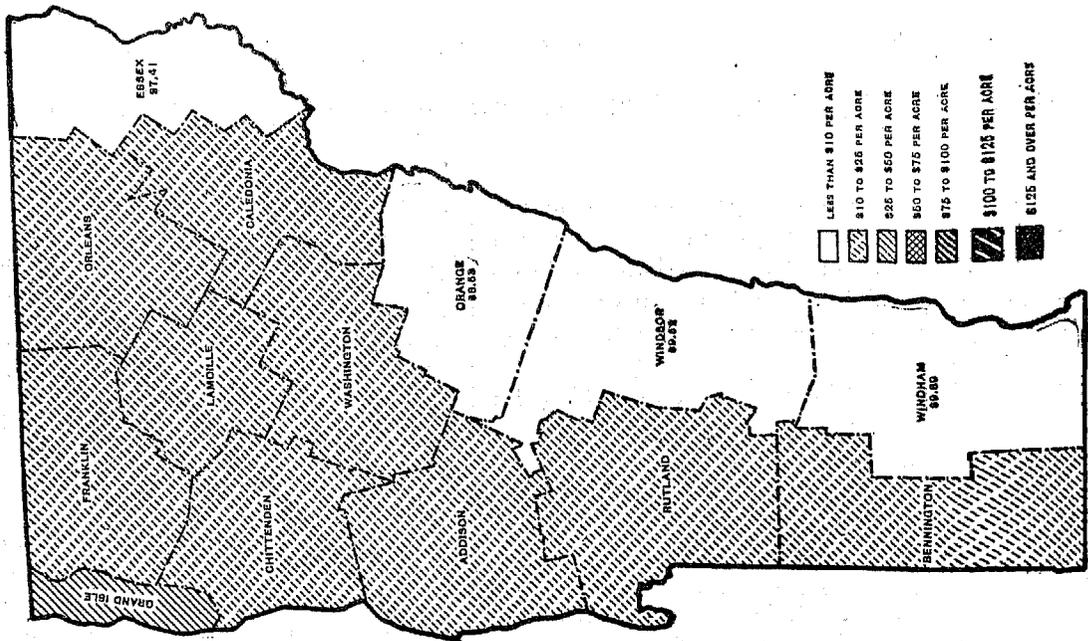

The per cent of area in farms, when less than 20, is inserted under the county name.

AVERAGE VALUE OF FARM LAND PER ACRE.

[Average for the state, \$12.53.]

When the value is less than \$10 per acre, it is inserted under the county name.

FARMS AND FARM PROPERTY.

Vermont ranks forty-second both in area and in population among the states of continental United States. From the standpoint of agricultural development it has long since passed out of the class of states having a large area of land suitable for cultivation by current methods and not yet so utilized, and is now included among the states that utilize for farming most of the land adapted to that purpose. The surface of the state everywhere is irregular and broken, because of mountains which divide it into nearly equal parts. The western part of the state has the best tracts of arable land.

The two maps on the opposite page show, for the different counties, the proportion of the total land area which is in farms and the average value of farm land per acre. Of the state's entire land area four-

fifths is in farms, and the first map shows that in every county except Essex at least three-fifths of the total land area is in farms, while in four counties the proportion exceeds nine-tenths.

The average value of farm land per acre for the whole state is \$12.52, and, as shown by the second map, in Grand Isle County the average value exceeds \$25 per acre, while in Essex, Orange, Windham, and Windsor Counties it falls below \$10. In all other counties the average value per acre falls between \$10 and \$25.

Progress during the decade 1900 to 1910.—The following table summarizes for the state the more significant facts relating to population and land area, the number, value, and acreage of farms, and the value of all other farm property in 1910 and 1900:

NUMBER, AREA, AND VALUE OF FARMS.	1910 (April 15)	1900 (June 1)	INCREASE. ¹	
			Amount.	Per cent.
Population.....	355,956	343,641	12,315	3.6

¹ A minus sign (—) denotes decrease.

² Less than one-tenth of 1 per cent.

Between 1900 and 1910 there was an increase of 12,315, or 3.6 per cent, in the population of the state, while there was a decrease of 395, or 1.2 per cent, in the number of farms, and of nearly 61,000 acres, or 1.3 per cent, in the area of farm land. The average size of the farms was, however, practically the same in both years.

Farm property, which includes land, buildings, implements and machinery, and live stock (domestic animals, poultry, and bees), has increased in value during the decade nearly \$37,000,000, or 34.1 per cent. This increase is chiefly made up of increases of \$16,945,000 in the value of buildings and of \$12,571,000 in the value of land, the latter representing an advance of 29.1 per cent in average value per acre. There was also an increase of \$7,432,000 in the value of farm equipment, including implements and machinery and live stock, of which more than three-fifths represents a gain in the value of live stock and the remainder the increase in the value of implements and machinery.

In considering the increase of values in agriculture the general increase in the prices of all commodities in the last 10 years should be borne in mind.

The average value of a farm with its equipment in 1900 was slightly under \$3,300, while 10 years later it was a little over \$4,400. The average value of land rose from approximately \$10 per acre in 1900 to over \$12.50 in 1910, this advance being accompanied by increases in the average value per farm of implements and machinery and of live stock.

Population, number of farms, and farm acreage: 1850 to 1910.—The next table presents, for the state as a whole for each census from 1850 to 1910, inclusive, a statement of the total population, the number of farms, the acreage of farm land and of improved land in farms, the percentage of the land area which was in farms, and the percentage of farm land improved, and also shows the percentage of increase during each decade in the number of farms and in the land in farms.

CENSUS YEAR.	Population.	FARMS.		LAND IN FARMS.			Per cent of land area in farms.	Per cent of farm land improved.
		Number.	Per cent of increase. ¹	All land.		Improved land (acres).		
				Acres.	Per cent of increase. ¹			
1910....	355,956	32,709	-1.2	4,663,577	-1.3	1,633,965	79.9	35.0
1900....	343,641	33,104	1.6	4,724,440	7.5	2,126,624	80.9	45.0
1890....	332,422	32,573	-8.3	4,395,646	-10.0	2,656,943	75.3	60.4
1880....	332,286	35,522	5.0	4,882,588	7.8	3,286,461	83.6	67.3
1870....	330,551	33,827	7.2	4,528,804	6.0	3,073,257	77.6	67.9
1860....	315,098	31,556	6.0	4,274,414	3.6	2,823,157	73.2	66.0
1850....	314,120	29,763	4,125,822	2,601,409	70.7	63.1

¹A minus sign (-) denotes decrease.

In the 60 years since 1850 the population of the state has increased by 41,836, or 13.3 per cent.

There was a gradual increase in the number of farms from 1850 to 1880, the total increase during the 30-year period being 5,759. During the 30 years from 1880 to 1910, however, there was a net decrease of 2,813, or an average of nearly 94 per year. The average decrease during the decade 1900 to 1910 was smaller, being only 40. In the northwestern part of the state (Chittenden, Franklin, and Grand Isle Counties) there has been an appreciable increase in the number of farms. Elsewhere the number has remained practically stationary or has shown a decrease, the decrease in no case, however, exceeding 9 per cent.

The land surface of Vermont is approximately 5,839,360 acres in extent. Of this area, 4,663,577 acres, or 79.9 per cent, are included in farms. Of the farm acreage, 1,633,965 acres, or 35 per cent, are reported as improved land, representing 28 per cent of the total land area of the state. The total acreage of farm land decreased 1.3 per cent during the last decade. The reported acreage of improved land shows a greater relative decrease from 1900 to 1910 than does the total acreage in farms, the percentage of farm land which is improved being considerably lower at the Thirteenth Census than in 1900.

For the longer period covered by the table a gradual increase from 1850 to 1880 in the total farm acreage and in the acreage of improved land is shown. The proportion of the total land area of the state which was occupied by farms rose during this period from 70.7 per cent to 83.6 per cent, while the improved land increased from 63.1 per cent to 67.3 per cent of the total land in farms. Since 1880, however, the proportion of land area in farms has decreased until in 1910 it was 79.9 per cent, though during a portion of the period—the decade 1890-1900—there was a slight increase. During the same 30-year period there has been a continuous decrease in the reported acreage of improved land, until in 1910 the percentage of total farm acreage improved was but little more than one-half as great as in 1880. The decrease doubtless represents a change in the classification of land by many farmers who now report as "unimproved land" much acreage which they formerly called "improved."

Values of farm property: 1850 to 1910.—The agricultural changes in Vermont since 1850, as reflected in the values of the several classes of farm property, are shown in the table which follows:

CENSUS YEAR.	FARM PROPERTY.							
	Total.		Land and buildings.		Implements and machinery.		Domestic animals, poultry, and bees.	
	Value.	Per cent of increase. ¹	Value.	Per cent of increase. ¹	Value.	Per cent of increase. ¹	Value.	Per cent of increase. ¹
1910.....	\$145,399,728	34.1	\$112,588,275	35.5	\$10,168,687	34.9	\$22,642,766	26.9
1900.....	108,451,427	6.5	83,071,620	3.3	7,538,490	59.3	17,841,317	7.2
1890.....	101,805,370	-22.2	80,427,490	-26.4	4,733,560	-3.0	16,644,320	0.4
1880.....	130,811,490	-3.0	109,346,010	-1.9	4,879,285	16.2	16,586,195	-13.2

1860.....	114,196,989	45.0	94,289,045	43.8	3,665,955	33.8	16,241,989	23.6
1850.....	78,749,737	63,367,227	2,739,282	12,643,228

¹A minus sign (-) denotes decrease.

²Computed gold values, being 80 per cent of the currency values reported.

The total wealth in the form of farm property is \$145,400,000, of which over three-fourths is represented by land and buildings, 7 per cent by implements and machinery, and over 15 per cent by live stock. The total value of farm property increased from 1900 to 1910 by \$36,948,000, or 34.1 per cent. Of this increase, \$29,517,000 represents the increase in the value of land and buildings, \$2,630,000 the increase in that of implements and machinery, and \$4,801,000 the increase in that of live stock. The actual and relative gain during the decade from 1900 to 1910 was over five times as great as during the decade immediately preceding; while in the two decades between 1870 and 1890, decreases in value were reported.

Average acreage and values per farm: 1850 to 1910.—The changes which have taken place during the past 60 years in the average acreage of Vermont farms and the average values of the various classes of farm property, as well as in the average value per acre of land and buildings, are shown in the following table:

CENSUS YEAR.	Average acres per farm.	AVERAGE VALUE PER FARM. ¹				Average value of land and buildings per acre.
		All farm property.	Land and buildings.	Implements and machinery.	Domestic animals, poultry, and bees.	
1910.....	142.6	\$4,445	\$3,442	\$311	\$692	\$24.14
1900.....	142.7	3,276	2,509	228	559	17.53
1890.....	134.9	3,125	2,469	145	511	15.30
1880.....	137.5	3,633	3,073	137	467	22.40
1870 ²	133.9	3,985	3,296	124	565	24.62
1860.....	135.5	3,619	2,988	116	515	22.05
1850.....	133.6	2,646	2,129	92	425	15.36

¹Averages are based on "all farms" in state.

²Computed gold values, being 80 per cent of the currency values reported.

In average size the Vermont farm has varied but little for the 60 years since 1850, the increase during that time being only 4 acres. The average size was greater in 1850 than at any subsequent date before 1900. Between 1850 and 1890 a slight decrease took place, interrupted by an increase between 1870 and 1880. Between 1890 and 1900 there was an in-

crease of nearly 8 acres, followed by a decrease of one-tenth of an acre during the last decade.

The average value of a Vermont farm, including its equipment, is a little more than \$4,400, of which over \$3,400 represents the value of land and buildings, almost \$700 the value of live stock, and over \$300 the value of implements and machinery. The average value of land and buildings has increased \$6.56 per acre during the last decade. An increase also took place during each decade between 1850 and 1870, but from 1870 to 1900 there was an uninterrupted decrease. The value per farm of equipment, which includes implements and machinery and live stock, is nearly twice as great as in 1850.

Farm tenure: 1880 to 1910.—The following table shows the distribution of the farms of the state according to character of tenure at each census since 1880:

TENURE.	1910	1900	1890	1880
Number of all farms.....	32,700	33,104	32,573	35,522
Farms operated by owners and managers.....	28,701	28,284	27,816	30,760
Farms consisting of owned land only.....	20,793	20,295	(1)	(1)
Farms consisting of owned and hired land.....	1,272	1,373	(1)	(1)
Farms operated by managers.....	636	615	(1)	(1)
Farms operated by tenants.....	4,008	4,820	4,757	4,762
Share tenants.....	1,642	2,396	2,456	2,598
Share-cash tenants ²	50			
Cash tenants.....	2,182	2,424	2,301	2,164
Tenure not specified ³	134			
Per cent of farms operated by—				
Owners and managers.....	87.7	85.5	85.4	86.6
Tenants.....	12.3	14.6	14.6	13.4
Share and share-cash.....	5.2	7.2	7.5	7.3
Cash and nonspecified.....	7.1	7.3	7.1	6.1

¹ Not reported separately.
² Share-cash tenants were doubtless largely included with share tenants in 1900, 1890, and 1880.
³ Prior to 1910 nonspecified tenants were included with cash tenants.

It is significant that while there was a decrease of 395 in the total number of farms during the last decade, an increase of 417 was reported in the number of farms operated by owners and managers and a decrease of 812 in the number operated by tenants.

In 1880 thirteen out of every hundred farms were operated by tenants. This proportion increased during the following decade, but during the next 20 years it decreased until in 1910 only twelve out of every hundred farms were thus operated.

The number of cash tenants is about the same as in 1890, but for the 30-year period as a whole it has been increasing, and since 1900 the number of cash tenants, including "nonspecified," has been greater than that of share tenants. The farms now rented for cash, including those for which the form of tenure is not reported, represent 7.1 per cent of the total, and those rented in whole or in part for a share of the products, 5.2 per cent. A decrease of 704 has occurred during the last decade in the number of farms operated by share and share-cash tenants.

The following table shows the acreage, improved acreage, and the value of land and buildings for farms operated by owners (including part owners), managers, and tenants, respectively.

FARMS OPERATED BY—	ALL LAND IN FARMS (ACRES).		IMPROVED LAND IN FARMS (ACRES).		VALUE OF LAND AND BUILDINGS.	
	1910	1900	1910	1900	1910	1900
Total.....	4,663,577	4,724,440	1,633,985	2,126,624	\$112,588,275	\$83,071,620
Owners.....	3,816,498	3,833,611	1,321,497	1,700,054	88,566,017	65,574,160
Managers.....	208,938	131,449	52,584	80,363	7,925,085	3,978,580
Tenants.....	638,141	759,380	259,884	366,207	10,096,178	13,518,880

The following table shows the per cent distribution by tenure groups of the items in the preceding table, and also of the number of farms:

FARMS OPERATED BY—	PER CENT OF TOTAL.							
	Number of farms.		All land in farms.		Improved land in farms.		Value of land and buildings.	
	1910	1900	1910	1900	1910	1900	1910	1900
Total.....	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0
Owners.....	85.8	83.6	81.8	81.1	80.9	79.9	73.7	78.9
Managers.....	1.9	1.9	4.5	2.8	3.2	2.8	7.0	4.8
Tenants.....	12.3	14.6	13.7	16.1	15.9	17.2	14.3	16.3

It will be seen that, in 1910, 81.8 per cent of all land in farms was in farms operated by their owners (including part owners), 4.5 per cent in farms operated by managers, and 13.7 per cent in farms operated by tenants, the percentages for owners and managers being higher and that for tenants lower than in 1900.

As shown by the next table the average size of farms operated by managers in 1910 (328.5 acres) was more than twice as great as that of farms operated by tenants (159.2 acres), which was in turn somewhat larger than that of farms operated by owners (136 acres). The average size of farms operated by managers increased greatly from 1900 to 1910, while that of farms operated by tenants increased slightly, and that of farms operated by owners showed a small decrease. In 1910 the percentage of farm land improved was highest for farms operated by tenants and lowest for those operated by managers.

FARMS OPERATED BY—	AVERAGE ACRES PER FARM.				PER CENT OF FARM LAND IMPROVED.		AVERAGE VALUE OF LAND AND BUILDINGS.			
	All land.		Improved land.		PER CENT OF FARM LAND IMPROVED.		Per farm.		Per acre.	
	1910	1900	1910	1900	1910	1900	1910	1900	1910	1900
Total.....	142.6	142.7	50.0	64.2	35.0	45.0	\$3,442	\$2,509	\$24.14	\$17.58
Owners.....	136.0	138.6	47.1	61.4	34.6	44.3	3,156	2,370	23.21	17.11
Managers.....	328.5	213.7	82.7	98.2	25.2	45.9	12,462	6,469	37.94	30.27
Tenants.....	159.2	157.5	64.8	76.0	40.7	48.2	4,016	2,805	25.22	17.80

Farm mortgages: 1890 to 1910.—The Eleventh Census (1890) was the first to collect data relating to mortgage debt on farms. The basis of the returns was the "farm home" occupied by its owner. The same class of information was secured by the population schedules of the Twelfth Census (1900). The agricultural schedules of the Thirteenth Census (1910) secured practically the same information, except that the basis was "owned farms" instead of "owned farm homes"—a difference involving, however, no appreciable incomparability.

The following table relates to farms operated by persons owning all or part of the land, and shows for 1910 (1) the number of such farms reported as free from mortgage; (2) the number reported as mortgaged; and (3) the number for which no mortgage reports were secured. Comparable items are included for 1900 and 1890.

CLASS.	OWNED FARMS. ¹		OWNED FARM HOMES.		OWNED FARM HOMES. ²	
	1910		1900		1890	
	Number.	Per cent. ³	Number.	Per cent. ³	Number.	Per cent.
Total.....	28,065		27,252		26,835	
Free from mortgage.....	14,861	53.1	14,151	53.1	14,935	55.7
Mortgaged.....	13,140	46.9	12,493	46.9	11,900	44.3
Unknown.....	74		608			

¹ Includes all farms owned in whole or in part by the operator.
² The 313 "owned farm homes" for which no reports were secured were distributed between "free from mortgage" and "mortgaged" in 1890.
³ Per cent of combined total of "free from mortgage" and "mortgaged."

According to the foregoing figures the actual number of mortgaged farm homes or mortgaged farms, operated by their owners, has increased continuously since 1890. Almost half the owned farms are mortgaged, the proportion being exactly the same as 10 years ago, but somewhat greater than in 1890. During the last two decades the number of owned farms has increased 1,230, or 4.6 per cent, while the number of owned farms which are mortgaged increased 1,240, or 10.4 per cent.

The following table gives a comparative statement of the value of mortgaged farms operated by their owners, and the amount of indebtedness, together with the average value of such farms, the average debt per farm, and the average equity per farm for 1910 and 1890. Data regarding the amount of mortgage debt were not obtained in 1900.

	OWNED FARMS OR FARM HOMES MORTGAGED.		INCREASE.	
	1910 ¹	1890 ²	Amount.	Per cent.
Number.....	12,138	11,900		
Value—Land and buildings.....	\$36,858,501	\$28,620,893		
Amount of mortgage debt.....	\$12,436,091	\$11,952,490		
Per cent of debt to value.....	33.7	41.8		
Average value per farm.....	\$3,037	\$2,405	\$632	26.3
Average debt per farm.....	\$1,025	\$1,004	\$21	2.1
Average equity per farm.....	\$2,012	\$1,401	\$611	43.6

¹ Includes only farms consisting wholly of owned land and reporting value of farm and amount of debt.
² Includes all owned farm homes, estimates being made of value of farms and amount of debt for all defective reports.

Of the farmers who report mortgage debt on farms operated by them, 606 own only a part of their farms and 12,534 own all of their farms. Of the latter number 12,138 report the amount of their mortgage debt as well as the fact of indebtedness. In this connection it should be noted that in 1890 as in 1910 there were many imperfect mortgage reports. At that time the amount of mortgage debt for farms without full reports was estimated according to the percentages and averages obtained from those with complete reports. No such estimate is here made for 1910.

The average debt of mortgaged farms increased in 20 years from \$1,004 to \$1,025, or 2.1 per cent, while the average value of such farms rose from \$2,400 to over \$3,000, or 26.3 per cent; thus the owner's equity increased from \$1,400 to over \$2,000, or 43.6 per cent. As a result of the greater increase in farm value than in farm debt, the mortgage indebtedness, which was 41.8 per cent of the value of the farm in 1890, has decreased to 33.7 per cent of this value in 1910.

Farms by size groups: 1910 and 1900.—The following table shows the distribution of farms by size groups at the censuses of 1910 and 1900:

SIZE GROUP.	NUMBER OF FARMS.		INCREASE. ¹		PER CENT OF TOTAL.	
	1910	1900	Number.	Per cent.	1910	1900
Total.....	32,709	33,104	-395	-1.2	100.0	100.0
Under 3 acres.....	60	224	-164	-73.2	0.2	0.7
3 to 9 acres.....	2,581	1,378	1,203	87.3	7.9	4.2
10 to 19 acres.....	1,937	1,683	254	15.1	5.9	5.1
20 to 49 acres.....	3,481	3,511	-30	-0.9	10.6	10.6
50 to 99 acres.....	5,910	6,513	-603	-9.3	18.1	19.7
100 to 174 acres.....	9,402	10,215	-723	-7.1	29.0	30.8
175 to 259 acres.....	5,194	5,512	-318	-5.8	15.9	16.0
260 to 499 acres.....	3,322	3,431	-109	-3.2	10.2	10.4
500 to 999 acres.....	607	536	71	13.2	1.9	1.6
1,000 acres and over.....	125	101	24	23.8	0.4	0.3

¹ A minus sign (-) denotes decrease.

Nearly half of all the farms in Vermont are between 50 and 174 acres in size. More than one-fourth are in the groups between 175 and 499 acres, and nearly one-fourth are between 3 and 49 acres in size. A study of the distribution of farms by size groups discloses the fact that the greatest actual and relative gain in number from 1900 to 1910 was made in the "3 to 9 acres" group. The number of places "under 3 acres" reported as farms is but little more than one-fourth as great as 10 years ago. This decrease may be due to a different interpretation by the enumerators as to what to include as a small farm, or may represent an actual decrease in that type of farm. Farms containing from 10 to 19 acres have increased 254, or 15.1 per cent. A decrease is shown for each group of farms falling between 20 and 499 acres, the aggregate decrease being 1,783, or 6.1 per cent. The farms which exceed 500 acres in size increased 95, or 14.9 per cent.

The following table shows the total and improved acreage and the value of land and buildings for farms of various size groups, consolidating into one group the farms of less than 20 acres (numbering in all 4,578), and also the farms of between 175 and 499 acres (numbering 8,516):

SIZE GROUP.	ALL LAND IN FARMS (ACRES).		IMPROVED LAND IN FARMS (ACRES).		VALUE OF LAND AND BUILDINGS.	
	1910	1900	1910	1900	1910	1900
Total.....	4,663,577	4,724,440	1,633,965	2,126,624	\$112,588,275	\$63,071,620
Under 20 acres.....	40,250	32,276	29,952	25,275	7,692,142	4,640,790
20 to 49 acres.....	112,129	120,740	58,062	70,396	7,038,230	5,061,070
50 to 99 acres.....	424,012	468,227	182,638	244,494	13,057,580	10,065,780
100 to 174 acres.....	1,238,117	1,328,066	480,120	636,139	29,253,550	22,584,190
175 to 499 acres.....	2,187,113	2,280,010	757,888	996,002	43,794,392	34,615,140
500 to 999 acres.....	371,849	322,903	95,940	117,538	6,114,956	3,920,200
1,000 acres and over.....	290,107	172,218	29,365	30,180	5,637,316	2,171,850

The following table shows the per cent distribution, by size groups, of the items presented in the preceding table, and also of the number of farms:

SIZE GROUP.	PER CENT OF TOTAL.							
	Number of farms.		All land in farms.		Improved land in farms.		Value of land and buildings.	
	1910	1900	1910	1900	1910	1900	1910	1900
Total.....	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0
Under 20 acres.....	14.0	9.9	0.9	0.7	1.8	1.2	6.8	4.9
20 to 49 acres.....	10.6	10.6	2.4	2.6	3.6	3.3	6.3	6.1
50 to 99 acres.....	18.1	19.7	9.1	9.9	11.2	11.5	11.6	12.8
100 to 174 acres.....	29.0	30.8	28.5	28.1	29.4	29.9	26.0	27.2
175 to 499 acres.....	26.0	27.0	46.9	48.3	46.4	46.9	38.9	41.7
500 to 999 acres.....	1.9	1.6	8.0	6.8	5.9	5.5	5.4	4.7
1,000 acres and over.....	0.4	0.3	6.2	3.6	1.8	1.7	5.0	2.6

Of the total farm acreage of the state in 1910, 46.9 per cent was in farms of 175 to 499 acres, this being by far the most important size group from the standpoint of total acreage. The farms of 100 to 174 acres comprised 26.5 per cent of the total acreage. Between 1900 and 1910 there was a considerable increase in the proportion of the total acreage which was in farms of 500 acres and over.

As shown by the table below, the percentage of farm land improved steadily diminishes as the size of the farms increases.

SIZE GROUP.	PER CENT OF FARM LAND IMPROVED.		AVERAGE VALUE OF LAND AND BUILDINGS.			
	1910	1900	Per farm.		Per acre.	
			1910	1900	1910	1900
Total.....	35.0	45.0	\$3,442	\$2,509	\$24.14	\$17.58
Under 20 acres.....	74.4	78.3	1,080	1,232	191.11	125.38
20 to 49 acres.....	51.8	58.3	2,022	1,442	62.77	41.92
50 to 99 acres.....	43.1	52.2	2,209	1,638	30.80	22.79
100 to 174 acres.....	33.8	47.9	3,082	2,211	23.03	17.01
175 to 499 acres.....	34.7	43.7	5,143	3,871	20.02	15.18
500 to 999 acres.....	25.8	36.4	10,074	7,314	16.44	12.14
1,000 acres and over.....	10.1	21.0	45,099	21,503	19.43	12.61

For the reason stated and also because buildings have normally a higher value in proportion to farm

DOMESTIC ANIMALS, POULTRY, AND BEES.

Domestic animals on farms: 1910.—The census of 1910 was taken as of April 15 and that of 1900 as of June 1. Since a great many domestic animals are born during the six weeks between April 15 and June 1, and on the other hand a considerable number of older animals are slaughtered or die during the same period, the numbers of the different classes of animals for the two censuses are not closely comparable, and the same is true in somewhat less degree of the values. For this reason the figures for 1900 are not presented in this chapter, but in the general reports of the census the figures for the several states will be presented and the extent to which their comparability is affected by the change in the date of enumeration will be discussed.

The next table summarizes the statistics of domestic animals on farms for the state, recorded as of April 15, 1910. Cattle and sheep are divided into

acreage on small than on large farms, the average value of land and buildings per acre of land also diminishes with the increase in the size of the farms, except that it is somewhat higher for farms of over 1,000 acres than for those of 500 to 999 acres; it is very much higher for the farms under 20 acres in size than for those of any other group.

Color and nativity of farmers: 1910.—Prior to the Thirteenth Census no attempt was made in the census of agriculture to secure information concerning the nativity of farmers. The table which follows shows the color and nativity of farm operators by character of tenure for 1910:

COLOR AND NATIVITY.	FARM OPERATORS.							
	Total.		Owners.	Tenants.	Managers.	Per cent of total.		
	Number.	Per cent distribution.				Own-ers.	Ten-ants.	Man-agers.
Total.....	32,709	100.0	28,065	4,008	636	85.8	12.3	1.9
Native white.....	28,968	88.6	24,789	3,603	576	85.6	12.4	2.0
Foreign-born white.	3,721	11.4	3,259	403	59	87.6	10.8	1.6
Negro and other nonwhite.....	20	0.1	17	2	1	85.0	10.0	5.0

Nearly nine-tenths of the Vermont farmers were in 1910 native whites and one-tenth foreign-born whites. Only 20, or one-tenth of 1 per cent of all farmers, were negroes. No other nonwhite farmers are reported. It is significant that only 10.8 per cent of the foreign-born white farmers were tenants, whereas 12.4 per cent of the native white farmers were in this class.

Of the 3,721 foreign-born white farmers in Vermont in 1910, 2,463 were born in Canada; 463 in Ireland; 210 in England; 158 in Wales; 118 in Scotland; 102 in Germany; and 61 in Sweden. Other European countries were represented by 144 farmers, and non-European countries, other than Canada, by 2.

age and sex groups, while horses, mules, and swine are presented by age groups only.

Of all the farms in the state, 86.4 per cent report cattle, 85.4 per cent "dairy cows," and only 22.6 per cent "other cows." Only 324 farms have cattle without having dairy cows. The total number of cows increased slightly during the decade, while the average value of dairy cows increased from \$28.65 to \$35.89. The farms reporting dairy cows show an average of nearly 10 per farm.

The census of 1900 was taken as of June 1, after all the spring calves were born; while that of 1910 was taken as of April 15, before the close of the calving season, and when the calves on hand were on the average younger than at the enumeration of 1900. As a result, the calves enumerated were fewer in number and of lower average value in 1910 than in

1900, the number decreasing from 101,584 to 67,573, and the average value decreasing from \$5.57 to \$4.84.

Horses are reported by 86.1 per cent of all the farms in the state, but only 9 per cent report colts born in 1909, and 0.6 per cent report spring colts. The average value of spring colts is more than one-third, and that of yearlings slightly over one-half, that of mature horses, which is \$108.79.

AGE AND SEX GROUP.	FARMS REPORTING.		ANIMALS.		
	Number.	Percent of all farms.	Number.	Value.	Average value.
Total.....	30,375	92.9	\$21,990,630

Hogs and pigs born before Jan. 1, 1910.....	16,168	49.4	54,537	798,831	14.65
Pigs born after Jan. 1, 1910.....	6,161	18.8	40,284	175,948	4.37
Sheep	5,033	15.4	118,551	538,991	4.55
Ewes born before Jan. 1, 1910.....	4,569	14.0	78,996	430,077	5.44
Rams and wethers born before Jan. 1, 1910.....	1,997	6.1	5,364	41,028	7.65
Lambs born after Jan. 1, 1910.....	2,702	8.3	34,191	67,886	1.99
Goats	69	0.2	261	1,033	3.96

¹ Less than one-tenth of 1 per cent.

Less than one farmer out of every hundred reports mules, mule colts, asses, or burros. The average value of mature mules was \$127.44, which was considerably higher than the average value of mature horses. The average value of yearling mule colts was \$81.09, or nearly two-thirds that of mature mules.

Sheep and lambs are reported from 5,033 farms, or 15.4 per cent of all the farms in the state. Of these 5,033 farms, 53.7 per cent report spring lambs, the number of the latter being equal to 43.3 per cent of the number of ewes; this comparatively small proportion is doubtless due to the early date of enumeration. Ewes are reported from all but 464 of the farms re-

porting sheep, and for the farms reporting the average is 17 ewes per farm. The farms reporting rams and wethers show an average of nearly 3 per farm.

Of all farms, 55 per cent report swine, the average number being 5 per farm reporting. The average value of the swine, reported as "hogs and pigs born before January 1, 1910," is nearly \$15, while that of spring pigs is about one-third as much.

Poultry on farms: 1910 and 1900.—The following table gives the numbers of the various kinds of poultry reported in 1910 and 1900, together with their value, and the number of farms reporting each kind in 1910:

KIND.	1910 (April 15)				1900 (June 1)
	Farms reporting.		Number of fowls.	Value.	Number of fowls.
	Number.	Percent of all farms.			
Total	27,528	84.2	938,524	\$607,787	843,163
Chickens.....	27,463	84.0	911,730	560,642	806,451
Turkeys.....	2,456	7.5	11,693	33,540	22,689
Ducks.....	1,252	3.8	4,561	4,107	5,836
Geese.....	677	2.1	2,505	4,867	5,187
Guinea fowls.....	938	2.9	3,742	2,446	(¹)
Pigeons.....	170	0.5	4,232	1,043	(¹)
Peafowls.....	2	(²)	7	35	(³)
Pheasants.....	1	(²)	54	108	(³)

¹ Included with chickens. ² Not reported. ³ Less than one-tenth of 1 per cent.

The increase in the number of fowls on Vermont farms during the last decade was 11.3 per cent, while the value showed an increase from \$421,000 to \$608,000, or 44.3 per cent. The increase represents a gain in the number of chickens sufficient to offset a decrease in the number of turkeys, ducks, and geese. The number of farms reporting poultry decreased from 28,711 to 27,528, but the average number of fowls per farm reporting increased from 29 to 34. The value of poultry and the number of farms reporting were obtained in 1900 for the total of all fowls only, and not for each kind as in 1910.

Bees on farms: 1910 and 1900.—The number of farms reporting bees has decreased from 1,878 in 1900 to 1,124 in 1910, or 40.1 per cent. The number of colonies of bees decreased from 12,836 to 10,215, or 20.4 per cent, and their value decreased from \$46,953 to \$44,349, or 5.6 per cent. A greater proportionate decrease is found in the number of colonies and in the number of farms reporting than in the total value of bees. The average value of bees per farm reporting was \$25 in 1900 and \$39.46 in 1910. Less than four farms in every hundred reported bees.

Domestic animals not on farms: 1910.—Most of the domestic animals not on farms are found in cities, towns, and villages. Statistics for such animals are shown below. No provision was made by law to secure data pertaining to poultry and bees not on farms. In the next table age groups are omitted for the sake of brevity, but it may be noted that in cities and villages a comparatively small proportion of the animals of each class are in the younger age groups.

KIND.	Number of inclosures reporting.	ANIMALS.		
		Number.	Value.	Average value.
Total.....	12, 095		\$2, 581, 230

Goats.....	281	1, 166	261	1, 038	20	133

As would be expected, horses are by far the most important class of domestic animals not on farms, both in number and in value; cattle, consisting mainly of dairy cows, rank next in importance.

Domestic animals on farms and not on farms: 1910.—The next table gives the total number and value of domestic animals, distinguishing those on farms from those not on farms.

The total value of all domestic animals in the state in 1910 was \$24,572,000, of which the value of animals not on farms represented 10.5 per cent. The number of horses not on farms was nearly one-fourth as great as the number on farms, but in the case of the other classes of animals the proportion not on farms was much lower.

LIVE STOCK PRODUCTS.

The returns for live stock products obtained at the census of 1910, like those for crops, relate to the activities of the calendar year 1909. It is impossible to give a total representing the annual production of live stock products for the reason that, as shown elsewhere, the total value of products from the business of raising domestic animals for use, sale, or slaughter can not be calculated from the census returns. Even if this value could be ascertained and were added to the value of the crops, the sum would not correctly represent the total value of farm products, because, as already more fully explained, duplication would result from the fact that part of the crops are fed to the live stock.

The number of farms reporting dairy cows on April 15, 1910, was 27,947, but only 26,636 reported dairy products in 1909. That there should be this small difference is not surprising. Doubtless some farmers who had dairy cows in 1910 had none in 1909, while other farmers neglected to give information for the preceding year, or were unable to do so, perhaps because the farm was then in other hands. Dairy products in general are somewhat less accurately reported than the principal crops. This is particularly the case as regards the quantity of milk produced. The number of farms which made any report of milk produced during 1909 was 25,433 (somewhat less than the total number reporting dairy products), and the number of dairy cows on such farms on April 15, 1910, was 247,000. The amount of milk reported was 114,317,000 gallons; assuming that there were the same number of cows in 1909 as in 1910, this would represent an average of 463 gallons per cow. In considering this average, however, it should be borne in mind that the quantity of milk reported is probably deficient and that the distinction between dairy and other cows is not always strictly observed in the census returns.

Dairy products: 1909 and 1899.—The following table shows the principal statistics relative to dairy products in 1909, with certain comparative statistics for 1899:

By reason of the incompleteness of the returns for milk produced, the Census Bureau has made no attempt to determine the total value of dairy products for 1909. For convenience a partial total has been presented comprising the reported value of milk, cream, and butter fat sold and the reported value of butter and cheese made, whether for home consumption or for sale. The total thus obtained for 1909 is \$12,128,000, which may be defined as the total value of dairy products exclusive of milk and cream used on the farm producing.

	FARMS REPORTING.		Number or quantity.	Unit.	VALUE.	
	Number.	Per cent of all farms			Total.	Average per unit.
Dairy cows on farms April 15, 1910.....	27, 947	85. 4	265, 483	Head.		
On farms reporting dairy products in 1909.....	26, 636	81. 4	250, 206	Head.		
On farms reporting milk produced in 1909.....	25, 433	77. 8	247, 126	Head.		
Specified dairy products, 1909:						
Milk reported.....	15, 102	46. 2	114, 317, 169	Gals.		
Butter made.....	88	0. 3	15, 165, 092	Lbs.	\$4, 185, 028	\$0. 28
Cheese made.....			245, 884	Lbs.	32, 533	0. 13
Milk sold.....	7, 540	23. 1	38, 998, 934	Gals.	4, 108, 228	0. 12
Cream sold.....	2, 988	9. 1	2, 353, 886	Gals.	1, 537, 698	0. 65
Butter fat sold.....	4, 780	14. 6	7, 786, 395	Lbs.	2, 264, 928	0. 29
Butter sold.....	10, 814	33. 1	12, 892, 124	Lbs.	3, 659, 314	0. 28
Cheese sold.....	74	0. 2	238, 319	Lbs.	31, 409	0. 13
Total receipts from sales, 1909.....					11, 501, 577	
Total value of milk, cream, and butter fat sold and butter and cheese made, 1909.....					12, 128, 465	
Specified dairy products, 1899:						
Butter made.....	19, 488	58. 9	18, 834, 706	Lbs.		
Cheese made.....	254	0. 8	406, 659	Lbs.		
Butter sold.....			15, 822, 671	Lbs.	3, 111, 788	0. 20
Cheese sold.....			374, 240	Lbs.	40, 077	0. 11

Considerably less than one-third of the milk produced in Vermont in 1909 was sold as such. A comparatively large quantity of milk and cream was sold

on a basis of butter fat. The butter made on farms in 1909 was valued at \$4,185,000.

Comparisons are made between 1909 and 1899 for but few of the census items relating to dairy products, for the reason that in 1899 estimates were made for farms with incomplete reports, which was not done at the census of 1910. The figures for milk produced and milk sold are particularly affected, but those for butter and cheese are approximately comparable. The table shows a material decrease between 1899 and 1909 in the amount of butter made, and a still greater relative decrease in the production of cheese.

Wool: 1909 and 1899.—The table below gives statistics as to the production of wool on farms, the figures being partly based on estimates:¹

	Number of farms reporting.	Sheep of shearing age.	WOOL PRODUCED.		
			Fleeces (number).	Weight (pounds).	Value.
Sheep of shearing age on farms, April 15, 1910.....	4,844	84,360			
Wool produced, as reported, 1909.	4,085		85,070	686,668	\$178,929
On farms reporting sheep, April 15, 1910.....	3,696	74,529	80,144	552,803	160,627
On other farms.....	339		4,926	33,765	9,302
Total production of wool (partly estimated):					
1909.....			90,716	625,722	192,002
1899.....			191,884	1,334,253	268,967
Decrease, 1899 to 1909.....			101,168	708,531	76,965
Per cent of decrease.....			52.7	53.1	28.0

The total number of sheep of shearing age in Vermont on April 15, 1910, was 84,360, representing a decrease of 53.7 per cent as compared with the number on June 1, 1900 (182,167). The approximate production of wool during 1909 was 91,000 fleeces, weighing 626,000 pounds and valued at \$192,000. Of these totals about 5 per cent represents estimates. The number of fleeces produced in 1909 was 52.7 per cent less than in 1899. The average weight per fleece in 1909 was 6.9 pounds, as compared with 7 pounds in 1899, and the average value per pound was 31 cents, as compared with 20 cents in 1899.

Goat hair and mohair: 1909 and 1899.—Although 69 farmers reported 261 goats and kids on their farms April 15, 1910, only 14 reported the production of goat hair or mohair during 1909. These farmers re-

¹ Farmers should be able in general to report the production of wool more accurately than that of dairy products. There were, however, 1,148 farmers who reported the possession of 9,831 sheep of shearing age on April 15, 1910, without reporting any wool produced in 1909. Probably in a large proportion of cases this failure was due to the fact that they did not have these sheep, or did not occupy the same farm, during the preceding year. The returns of farms reporting wool in 1909 but no sheep of shearing age on April 15, 1910, would partially make up this deficiency, but it is believed that in many cases enumerators, having found that a farm had no sheep in 1910, omitted the inquiry as to wool produced in 1909 and thus missed more or less wool actually produced. It is a fairly safe assumption that the entire production of wool in 1909 bore the same relation to the entire number of sheep of shearing age on April 15, 1910, as the production of wool on those farms reporting both production and sheep bore to the number of sheep reported on such farms. Statistics for this group of farms are given in the table, and the total wool product, estimated on the basis of the above assumption, is also given.

ported 97 fleeces, weighing 471 pounds and valued at \$136. Many farmers who have goats do not produce goat hair or mohair, but it is believed that the report is somewhat short of the actual production.

Poultry products: 1909 and 1899.—The next statement gives the data relative to the production and sale of eggs and poultry:

	Number of farms reporting.	Number of fowls on hand.	PRODUCT.	
			Quantity.	Value.
Fowls on farms, April 15, 1910.....	27,528	938,524		
On farms reporting eggs produced in 1909.....	24,910	879,361		
On other farms.....	2,618	59,163		
Eggs produced, as reported, 1909.....	25,423		6,580,466	\$1,604,925
Total production of eggs (partly estimated):				
1909.....			7,037,082	1,715,221
1899.....			6,271,880	950,965
Increase, 1899 to 1909.....			765,202	755,256
Per cent of increase.....			12.2	78.7
Eggs sold, as reported, 1909.....	21,432		4,451,120	1,092,578
Fowls on farms, April 15, 1910:				
On farms reporting poultry raised in 1909.....	23,321	845,116		
On other farms.....	4,207	93,408		
Poultry raised, as reported, 1909.....	23,950		No. of fowls.	683,785
Total poultry raised (partly estimated):			1,154,879	
1909.....			1,282,524	759,362
1899.....				689,109
Increase, 1899 to 1909.....				70,253
Per cent of increase.....				10.2
Fowls sold, as reported, 1909.....	14,933		579,614	387,410

The total number of fowls on Vermont farms on April 15, 1910, was 939,000. Of the 27,528 farms reporting fowls, 2,618 did not report any eggs produced in 1909, and 4,207 did not report any poultry raised in 1909. The production of eggs actually reported for the year 1909 was 6,580,000 dozens, valued at \$1,604,000. According to the Twelfth Census reports, the production of eggs in 1899 was 6,272,000 dozens, the value being \$960,000. The latter figures, however, are somewhat in excess of the actual returns at that census, because they include estimates made to cover those cases where the schedules reported fowls on hand without reporting the production of eggs. In order to make the returns for 1909 comparable with those published for 1899, similar estimates have been made, the method of estimate and the justification therefor being substantially the same as in the case of wool. The total production of eggs in 1909, including these estimates, was 7,037,000 dozens, valued at \$1,715,000. The total production of poultry in 1909, including estimates made on the same basis as for eggs, was 1,283,000 fowls, valued at \$759,000.

Honey and wax: 1909.—Although, as noted elsewhere, 1,124 farms reported 10,215 colonies of bees on hand April 15, 1910, 377 of these farms, with 1,152 colonies on hand April 15, 1910, made no report of honey or wax produced in 1909. The actual returns show the production of 160,283 pounds of honey, valued at \$25,351, and 2,899 pounds of wax, valued at \$815; the true totals are doubtless somewhat above these figures.

Sale or slaughter of domestic animals on farms: 1909 and 1899.—The next statement presents statistics relating to the sale or slaughter of domestic animals by Vermont farmers during the year 1909, with certain items for 1899.

The total value of domestic animals sold during 1909 was \$5,991,000, and that of animals slaughtered on farms \$1,468,000, making an aggregate of \$7,459,000. This total, however, involves considerable duplication, resulting from the resale or slaughter of animals which had been purchased by the farmers during the same year.

The value of the cattle (including calves) sold during 1909 represented about two-thirds of the total value of animals sold.

The census of 1900 called for the receipts from the sale of domestic animals raised on the farms reporting and the total value of those slaughtered during 1899, which amounted, respectively, to \$2,786,000 and \$1,348,000. The item of sales is not closely comparable with that for 1909, when the inquiry covered all sales whether of animals raised on the farms reporting or elsewhere. It is believed, however, that in many cases the returns for 1899 also included receipts from

sales of animals not actually raised on the farms reporting.

	FARMS REPORTING.		Number of animals.	VALUE.

² Schedules called for receipts from sales of animals raised on the farms reporting.

CROPS.

Summary: 1909 and 1899.—The following table summarizes the census data relative to all of the farm crops of 1909 and 1899. It includes not only general farm crops, but also flowers and plants, nursery products, and forest products of farms. In comparing one year with the other it should be borne in mind that acreage is on the whole a better index of the general

changes or tendencies of agriculture than either the quantity or the value of the crops, since variations in quantity may be due largely to temporarily favorable or unfavorable climatic conditions, and variations in the value of the crops are largely affected by changes in prices. (See also discussion of "Total value of farm products.")

	ACRES.				PER CENT OF IMPROVED LAND OCCUPIED.		VALUE OF PRODUCTS.						
	1909	1899	Increase. ¹		1909	1899	1909	1899	Increase. ¹		Per cent of total.

¹ A minus sign (-) denotes decrease. ² Less than one-tenth of 1 per cent. ³ Less than 1 acre. ⁴ Per cent not calculated when base is less than 100.
⁵ Includes value of raisins and other dried fruits, wine, cider, vinegar, etc.

The total value of crops in 1909 was \$27,447,000. Of this amount, 79.7 per cent was contributed by crops for which the acreage as well as the value was reported, the remainder consisting of the value of by-products

(straw, garden and grass seeds, etc.) derived from the same land as other crops reported, or of orchard fruits, nuts, forest products, and the like. The combined acreage of crops for which acreage was reported was 1,203,795, representing 73.7 per cent of the total improved land in farms (1,633,965 acres). Most of the remaining improved land doubtless consisted of improved pasture, land lying fallow, house and farm yards, and land occupied by orchards and vineyards, the acreage for which was not reported.

The general character of Vermont agriculture is indicated by the fact that only 9.7 per cent of the total value of crops in 1909 was contributed by the cereals, while about three-fifths (59.5 per cent) was contributed by hay and forage, and more than one-eighth (13.3 per cent) by forest products. The remainder, representing in value 17.5 per cent of the total, consisted mostly of potatoes and other vegetables, maple sugar and sirup, and fruits and nuts.

The total value of crops in 1909 was 51.1 per cent greater than that in 1899. There was practically no change in the total acreage of crops for which acreage was reported, there being a decrease in the acreage of the cereals and of potatoes and an increase in that of hay and forage and of vegetables, other than potatoes.

General farm crops, minor grains and seeds, and sundry minor crops: 1879 to 1909.—The following table presents statistics for 1909 regarding cereals, other grains and seeds, hay and forage, potatoes, tobacco, and sundry minor crops:

CROP.	Farms reporting.	Acres harvested.	QUANTITY.		Value.
			Amount.	Unit.	
Cereals, total		134,611	4,351,467	Bu...	\$2,651,877

Root forage.....	178	76	815	Tons.	7,358
Potatoes	27,848	26,859	4,145,630	Bu...	1,743,049
Sweet potatoes and yams.....	2	1	132	Bu...	67
Tobacco.....	45	103	164,680	Lbs.	17,416
Sundry minor crops, total.....	5	(⁴)	31	Lbs.	191

¹ Includes small amount of flaxseed.

² Includes small amounts of other varieties of grass seeds.

³ The entire acreage from which these seeds were secured is believed to be included in the acreage given elsewhere for hay and forage crops, flowers and plants, etc.

⁴ Less than 1 acre.

The leading crops covered by the table, in the order of their importance as judged by value; are hay and forage, \$16,336,000; potatoes, \$1,743,000; oats, \$1,169,000; and corn, \$1,102,000. It should be noted, however, that forest products of farms, reported in another table, are more important than corn, oats, or potatoes.

Vermont appears to be declining as a grain-growing state, and about stationary in the production of hay and forage. The total value of hay and forage crops for 1909 is six times that of the cereals, while the value of potatoes, the second crop in importance, is but little more than one-tenth that of the former. There is a considerable list of other grain and seed crops, of which, however, only a few are important in acreage and value. Of these, beans are the most important, yet they are grown by but one farmer in twelve, and by them on an average of less than an acre each. Alfalfa is reported from every county except Orleans; yet for the state as a whole but one farmer in three hundred and twenty-seven raises it. "Timothy and clover mixed" shows by far the greatest acreage of any of the forage crops. "Other tame or cultivated grasses," "timothy alone," "coarse forage," and "grains cut green" follow in the order named. The hay and forage acreage is nearly eight times as great as the cereal acreage, and is generally distributed over the state. Potatoes are raised on a large percentage of the farms, though less than 1 acre per farm is reported.

The fluctuations in the acreages of some of the principal crops during the past 30 years are shown in the following table:

CROP YEAR.	ACRES HARVESTED.					
	Corn.	Oats.	Wheat.	Barley.	Buckwheat.	Hay and forage.
1909.....	42,887	71,510	678	10,536	7,659	1,030,618
1899.....	60,633	73,372	1,796	12,152	9,910	1,030,375
1889.....	41,700	101,582	3,397	16,427	13,429	994,107
1879.....	55,249	90,548	20,748	10,552	17,649	1,015,620

A decrease in corn acreage is shown in 1909 as compared with 1879, although in 1899 the acreage was larger than that reported at any other census. While every county reports a decrease during the past decade, the decline is heaviest in the northern part of the state. Half of the corn acreage in the state is in Windsor, Rutland, Addison, and Chittenden Counties. The acreage of oats exceeds that of corn, but it too shows a decrease since 1879. The maximum production of oats was reached in 1889. Half of the oat crop is reported from Addison, Franklin, Chittenden, and Rutland Counties. Barley reached about the same figure in 1909 as 30 years before, having been well above that point at the two intervening censuses. Wheat shows a continuous and marked decline during the entire period, and in 1909 had slightly less than one-thirtieth of the acreage occupied in 1879. Buckwheat also shows a constant decrease during the whole period, and had in 1909 an acreage less than half that of 30 years before.

The following table shows for 1909 and 1899 the percentage which the farms reporting specified crops represented of all farms, the percentage of improved land devoted to these crops, and the percentage of increase or decrease in the acreage of each crop during the decade, together with the average yields and average values per acre for 1909:

CROP.	PER CENT OF FARMS REPORTING.		PER CENT OF IMPROVED LAND.		Per cent of increase in acres: 1899 to 1909 ¹	AVERAGE YIELD PER ACRE.	AVERAGE VALUE PER ACRE.
	1909	1899	1909	1899		1909	1909
	Corn.....	42.1	62.2	2.6	2.9	-29.3	40.0 Bu.
Oats.....	38.5	46.3	4.4	3.5	-2.5	29.9 Bu.	16.35
Barley.....	10.9	13.7	0.6	0.6	-12.9	26.9 Bu.	21.33
Buckwheat.....	10.9	14.5	0.5	0.5	-22.7	22.8 Bu.	15.94
Hay and forage.....	97.6	98.3	63.1	47.3	2.4	1.46 Tons.	15.85
Dry edible beans.....	8.4	9.5	0.1	0.1	-0.6	11.0 Bu.	30.49
Potatoes.....	85.1	88.1	1.6	1.3	-5.3	164.3 Bu.	64.90

¹ A minus sign (-) denotes decrease.

A marked decrease is noted in the percentage of farms reporting cereals. Slightly more than two out of five farms report corn, and a little under that proportion report oats. Barley and buckwheat are reported with equal frequency, but each by less than 11 per cent of all farms. In contrast to the small percentage of farms reporting cereals is the high percentage reporting hay and forage, namely, nearly 98 per cent. About one-twelfth of all improved land is in cereals and nearly two-thirds in hay and forage.

Of the cereals, all show a falling off in acreage between 1899 and 1909, the greatest being in that of corn and the smallest in that of oats. Of all the crops listed in the table, hay and forage alone shows an increase in acreage, which, however, is inconsiderable. Potatoes and beans decreased slightly in acreage.

The average values per acre of corn and barley are above the average for all cereals combined (\$19.70), while those of oats and buckwheat are below it. The average value per acre of hay and forage is about \$4 below that of all cereals combined. The average value of beans per acre is over one and one-half times as great as that of the combined cereals, and that of potatoes more than three times as great as that of the cereals and four times as great as that of hay and forage. The reported production of corn is exaggerated to a slight extent, because some enumerators report baskets of ear corn as bushels of corn. On this account the figures here given may be revised in later census reports.

Vegetables, flowers and plants, and nursery products: 1909 and 1899.—The next table shows details with regard to vegetables (not including potatoes and sweet potatoes and yams, which appear elsewhere), and also with regard to flowers and plants and nursery products.

In 1909 the total acreage of potatoes and other vegetables was 35,408 and their value \$2,615,000. Excluding (so far as reported separately¹) potatoes

¹ It is probable that some of the potatoes and sweet potatoes and yams raised in farm gardens were not reported separately by farmers, but were included in their returns for vegetables.

and sweet potatoes and yams, the acreage of vegetables was 8,548 and their value \$872,000, both acreage and value being decidedly greater than in 1899. The table distinguishes between farms which make the raising of vegetables a business of some importance (having produced vegetables valued at \$500 or more in 1909) and other farms, on most of which vegetables are raised mainly for home consumption. While there were in 1909 only 122 farms in the first class, they reported nearly one-tenth of the total acreage of vegetables and about one-eighth of the total value, the average acreage of vegetables per farm for these farms being 6.8 and the average value per acre \$134.

The raising of flowers and plants and of nursery products is relatively unimportant in Vermont, only 60 acres being devoted to them in 1909, and the total output being valued at \$89,740. Most of the product was raised on a few farms where these branches of agriculture were carried on as an important business.

CROP.	FARMS REPORTING: 1909		ACRES.		VALUE OF PRODUCTS:	
	Number.	Per cent of all farms.	1909	1899	1909	1899
Vegetables, other than potatoes and sweet potatoes and yams, total.....	126,948	82.4	8,548	5,131	\$872,183	\$371,744
Farms reporting a product of \$500 or over.....	122	0.4	832	111,530
All other farms.....	26,826	82.0	7,716	760,653
Flowers and plants, total.....	45	0.1	23	38	78,726	58,575
Farms reporting a product of \$250 or over.....	28	0.1	76,149
All other farms.....	17	0.1	2,577
Nursery products, total.....	9	(²)	37	74	11,014	49,625
Farms reporting a product of \$250 or over.....	3	(²)	10,643
All other farms.....	6	(²)	371

¹ Does not include 904 farms which reported that they had vegetable gardens, but gave no information as to their products.
² Less than one-tenth of 1 per cent.

Small fruits: 1909 and 1899.—The following table shows data with regard to small fruits on farms:

CROP.	Number of farms reporting: 1909	ACRES.		Quantity (quarts): 1909	Value: 1909
		1909	1899		
Small fruits, total.....	469	418	826,122	\$92,030
Strawberries.....	1,240	276	232	615,820	68,000
Blackberries and dewberries.....	433	47	48	56,252	6,082
Raspberries and loganberries.....	691	30	92	85,065	10,596
Currants.....	992	58	30	53,533	5,684
Gooseberries.....	244	6	3	7,424	728
Cranberries.....	29	1	1,120	110
Other berries.....	3	1	13	1,908	190

Strawberries are by far the most important of the small fruits grown in Vermont, with raspberries and loganberries ranking next. The total acreage of small fruits in 1909 was 469, and in 1899, 418, an increase of 12.2 per cent. The production in 1909 was 826,000 quarts, as compared with 930,000 quarts in 1899, and the value \$92,030, as compared with \$85,121.

Orchard fruits, grapes, and nuts: 1909 and 1899.—The next table presents data with regard to orchard

fruits, grapes, and nuts. The acreage devoted to these products was not ascertained. In comparing one year with the other the number of trees or vines of bearing age is on the whole a better index of the general changes or tendencies than the quantity of product, but the data for the censuses of 1910 and 1900 are not closely comparable and the product is therefore compared, although variations may be due largely to temporarily favorable or unfavorable climatic conditions.

CROP.	TREES OR VINES OF BEARING AGE: 1910		TREES OR VINES NOT OF BEARING AGE: 1910		PRODUCT.		
	Farms re- port- ing.	Num- ber.	Farms re- port- ing.	Num- ber.	1909		1899

Chestnuts.....	23	250	4	92	3,350	149	(²)
Unclassified.....	³ 103,850

¹ Expressed in bushels for orchard fruits and pounds for grapes and nuts.

² Included with "unclassified."

³ Consists of products not separately named by the enumerator, but grouped under the designation "all other."

⁴ Includes almonds, pecans, beechnuts, hazelnuts, and other nuts.

The total quantity of orchard fruits produced in 1909 was 1,492,000 bushels, valued at \$801,000. Apples contributed nearly all of this quantity, and pears most of the remainder. The production of grapes and nuts was comparatively unimportant. The nuts consisted chiefly of butternuts.

The production of all orchard fruits increased 25.3 per cent in quantity between 1899 and 1909, while the production of grapes decreased 15.4 per cent. The value of orchard fruits increased from \$450,000 in 1899 to \$801,000 in 1909, while that of grapes decreased from \$7,035 in 1899 to \$6,328 in 1909. It should be noted in this connection that the values for 1899 include the value of more advanced products derived from orchard fruits or grapes, such as cider, vinegar, dried fruits, and the like, and may therefore involve some duplication, while the values shown for 1909 relate only to the products in their original condition.

The next table shows the quantities of the more advanced products manufactured by farmers from orchard fruits and grapes. Values were not called for on the schedule.

PRODUCT.	FARMS REPORTING: 1909		QUANTITY PRODUCED.		
	Num- ber.	Percent of all farms.	Unit.	1909	1899
Cider.....	6,564	20.1	Gals...	651,160	314,937
Vinegar.....	2,434	7.4	Gals...	96,520	59,251
Wine and grape juice.....	93	0.3	Gals...	1,199	160
Dried fruits.....	215	0.7	Lbs....	5,828	12,420

Sugar crops: 1909 and 1899.—The table below shows data with regard to maple trees and their products, and also for sugar beets and sorghum cane, which in this state are unimportant. The total value of maple sugar and sirup produced in 1909 was \$1,087,000, as compared with \$599,000 in 1899.

PRODUCT.	FARMS REPORTING.		Acres.	PRODUCT.		
	Num- ber.	Per cent of all farms.		Amount.	Unit.	Value.
Maple sugar and sirup:						
Total, 1909.....	10,060	30.8	45,535,632	7,725,817	Lbs....	\$1,089,033

Sugar beets, 1909 ⁴	11	(³)	5	46	Tons....	322
Sorghum cane, 1909 ⁴	1	(³)	2	4	Tons....	40

¹ Number of trees.

² Used as root forage.

³ Less than one-tenth of 1 per cent.

⁴ Used as coarse forage.

Forest products: 1909 and 1899.—The census schedules for 1910 called for the "value of all firewood, fencing material, logs, railroad ties, telegraph and telephone poles, materials for barrels, bark, naval stores, or other forest products cut or produced in 1909, whether used on farm, sold, or on hand April 15, 1910;" and also, in a separate item, for the "amount received from sale of standing timber in 1909." There were 22,114 farms in Vermont (67.6 per cent of all farms in the state) which reported forest products in 1909, the total value of such products being \$3,638,537, as compared with \$2,108,518 in 1899, an increase of 72.6 per cent. Of the value in 1909, \$1,573,534 was reported as that of products used or to be used on the farms themselves, \$1,762,537 as that of products sold or for sale, and \$302,466 as the amount received for standing timber. It should be noted that forest products not produced on farms are not included in this report.

Miscellaneous crops: 1909.—Straw and cornstalks derived as by-products from the production of grain and corn have a considerable value for feed and other purposes. They are, however, mainly consumed on the farms producing them. The Census Bureau made no attempt to ascertain the total quantity or value of these products, but the schedules called for the

quantity and value of those sold during the year 1909. The returns show that 476 farmers in Vermont sold, during 1909, 2,008 tons of straw, for which they

received \$16,342, and that 153 farmers sold 887 tons of cornstalks and leaves, for which they received \$4,517.

SELECTED FARM EXPENSES AND RECEIPTS.

Farm expenses: 1909 and 1899.—The following table shows the number of farms reporting expenditures for labor, feed, and fertilizer at the census of 1910, as well as the sums expended in 1909 and 1899:

EXPENSE.	1909			1899	INCREASE.	
	Farms reporting.		Amount.	Amount.	Amount.	Per cent.
	Number.	Percent of all farms.				
Labor.....	21,810	66.7	\$4,743,003	\$3,133,140	\$1,614,863	51.5
Feed.....	26,332	80.5	4,758,703	(1)	123,687	27.7
Fertilizer.....	19,033	58.2	570,752	447,055		

1 Not reported at the census of 1900.

Approximately 25 per cent of the amount expended for labor is in the form of rent and board. During the decade the total expenditure for labor increased 51.5 per cent. Slightly more than two-thirds of the farmers hire labor, and the average amount expended by the farmers hiring is about \$218. At prior censuses no tabulation was made of the farmers reporting expenditures for labor.

Four farmers out of every five report some expenditure for feed, and three out of five expenditure

for fertilizer. The total amount reported as paid for fertilizer shows an increase of about \$124,000, or 27.7 per cent, since 1899; and the average amount spent per farm, reporting in 1909, is \$30.

Receipts from sale of feedable crops: 1909.—An effort was made at the census of 1910 to secure as complete a statement as possible of the sales, as well as the production, of the more important feedable crops (that is, crops ordinarily fed to live stock). The following table summarizes the data reported:

CROP.	FARMS REPORTING.		QUANTITY SOLD.		Amount received.
	Number.	Percent of all farms.	Amount.	Unit.	
Total.....					\$966,276
Corn.....	225	0.7	18,427	Bu.....	11,899
Oats.....	555	1.7	52,674	Bu.....	30,193
Barley.....	193	0.6	6,944	Bu.....	5,936
Hay and coarse forage.....	5,089	15.6	66,834	Tons.....	918,248

Whereas more than 26,000 farmers purchased feed during the year 1909, less than 6,000 sold any kind of feed. The total amount expended for feed by those who reported purchases was nearly five times as great as the receipts from sales by those reporting sales.

COUNTY TABLES.

Tables 1 to 6, which follow, present by counties the more important agricultural data collected at the Thirteenth Census, 1910.

Table 1 shows the population, number of farms, land and farm area, value of farm property, and number and value of domestic animals and of poultry and bees, as of April 15, 1910. Comparative data for June 1, 1900, are given in italics for certain items.

Table 2 gives the number of farms, the farm acreage, and the value of farm property operated by owners, tenants, and managers, collected as of April 15, 1910. Statistics of farm mortgages are included in this table. (See explanation in text.) Comparative data for June 1, 1900, are given in italics for certain items.

Table 3 gives statistics pertaining to the products

of live stock on farms (dairy products, poultry and eggs, honey and wax, and wool and mohair); also the number and value of domestic animals sold or slaughtered on farms for the year 1909.

Table 4 shows the total value of farm crops and the principal classes thereof, together with the acreage (or trees of bearing age) and production of the principal crops for the year 1909.

Table 5 gives statistics relating to selected farm expenses for 1909 and also shows the receipts from the sale of feedable crops.

Table 6 shows the number and value of domestic animals in barns and inclosures not on farms by classes, together with the number of dairy cows and mature horses and mules, on April 15, 1910.

CHAPTER 4.

STATISTICS OF MANUFACTURES FOR THE STATE, CITIES, AND INDUSTRIES.

Introduction.—This chapter gives the statistics of manufactures for the state of Vermont for the calendar year 1909 as shown by the Thirteenth Census.

The text summarizes the general results of the census inquiry, presenting a series of special tables in which the main facts printed in the general tables are given in convenient form for the state as a whole and for important industries. It also presents tables in which the statistics for the industries of the state as a whole and for a few important industries are classified by character of ownership, size of establishments, number of wage earners, and prevailing hours of labor, information which could not be presented in general tables for each industry without disclosing the facts for individual establishments.

At the end of the chapter are three general tables.

Table I gives for 1909, 1904, and 1899 the number of establishments and of persons engaged in the industries, primary power, capital, salaries and wages, cost of materials, value of products, and value added by manufacture reported for all industries combined and for certain important industries for the state as a whole. It also gives the same items for all industries combined for the three cities having in 1910 a population of 10,000 or over.

Table II gives statistics in detail for 1909 for the state and for a larger number of industries.

Table III gives statistics in detail for 1909 for each city having from 10,000 to 50,000 inhabitants for all industries combined.

Scope of census: Factory industries.—Census statistics of manufactures are compiled primarily for the purpose of showing the absolute and relative magnitude of the different branches of industry covered and their growth or decline. Incidentally, the effort is made to present data throwing light upon character of organization, location of establishments, size of establishments, labor force, and similar subjects. When use is made of the data for these purposes, it is imperative that due attention should be given to the limitations of the figures. Particularly is this true when the attempt is made to derive from them figures purporting to show average wages, cost of production, or profits. These limitations will be fully discussed in the general report on manufactures for the United States as a whole.

The census of 1909, like that of 1904, was confined to manufacturing establishments conducted under the factory system, as distinguished from the neighborhood, hand, and building industries. Where statistics for 1899 are given they have been reduced to a comparable basis by eliminating the latter classes of industries. The census does not include establishments which were idle during the entire year, or had a value of products of less than \$500, or the

manufacturing done in educational, eleemosynary, and penal institutions, or in governmental establishments, except those of the Federal Government.

Period covered.—The returns cover the calendar year 1909, or the business year which corresponds most nearly to that calendar year. The statistics cover a year's operations, except for establishments which began or discontinued business during the year.

The establishment.—The term "establishment" comprises the factories, mills, or plants, which are under a common ownership or control, and for which one set of books of account is kept.

If, however, the plants constituting an establishment as thus defined were not all located within the same city or state, separate reports were secured in order that the separate totals might be included in the statistics for each city or state. In some instances separate reports were secured for different industries carried on in the same establishment.

Classification by industries.—The establishments were assigned to the several classes of industries according to their products of chief value. The products reported for a given industry may thus, on the one hand, include minor products very different from those covered by the class designation, and, on the other hand, may not include the total product covered by this designation, because some part of this product may be made in establishments in which it is not the product of chief value.

Selected industries.—The general tables at the end of this chapter give the principal facts separately for the industries of the state. A selection has been made of the leading industries of the state for more detailed consideration. Sometimes an industry of greater importance than some of those selected is omitted, because it comprises so few establishments that these detailed presentations would reveal the operations of individual concerns.

Comparisons with previous censuses.—Owing to the changes in industrial conditions it is not always possible to classify establishments by industries in such a way as to permit accurate comparison with preceding censuses. Table I, giving comparable figures for 1909, 1904, and 1899, therefore, does not embrace all the industries shown for 1909 in Table II.

Influence of increased prices.—In considering changes in cost of materials, value of products, and value added by manufacture, account should be taken of the general increase in the prices of commodities during recent years. To the extent to which this factor has been influential the figures can not be taken as an exact measure of increase in the volume of business.

Persons engaged in industry.—At the censuses of 1909, 1904, and 1899 the following general classes of persons engaged in manufacturing industries have been distinguished: (1) Proprietors and firm members, (2) salaried officers of corporations, (3) superintendents and managers, (4) clerks, and (5) wage earners. In the censuses of 1904 and 1899 these five classes were shown according to the three main groups: (1) Proprietors and firm members, (2) salaried officials, clerks, etc., and (3) wage earners. The second group included the three classes of salaried officers of corporations, superintendents and managers, and clerks. In the present census an entirely different grouping is employed: That into (1) proprietors and officials, (2) clerks, and (3) wage earners. The first group includes proprietors and firm members, salaried officers of corporations, and superintendents and managers.

At this census the number of persons engaged in the industries, segregated by sex, and in the case of wage earners, also by age (whether under 16 or 16 and over), was reported for December 15, or the nearest representative day. The 15th of December was selected as representing for most industries normal conditions of employment, but where conditions were exceptional, and particularly in the case of certain seasonal industries, such as canning, the December date could not be accepted as typical and an earlier date had to be chosen.

In the case of employees other than wage earners the number thus reported on December 15, or other representative day, has been treated as equivalent to the average for the year, since the number of employees of this class does not vary much from month to month in a given industry. In the case of wage earners the average is obtained in the manner explained in the next paragraph.

Wage earners.—In addition to the report by sex and age of the number of wage earners on December 15, or other representative day, a report was obtained of the number employed on the 15th of each month, without distinction of sex or age. From these figures the average number of wage earners for the year has been calculated by dividing the sum of the numbers reported each month by 12. The average thus obtained represents the number of wage earners that would be required to perform the work done if all were constantly employed during the entire year. Accordingly, the importance of any industry as an employer of labor is believed to be more accurately measured by this average than by the number employed at any one time or on a given day.

The number of wage earners reported for the representative day, though given for each separate industry, is not totaled for all industries combined, because in view of the variations of date such a total is believed not to be significant. It would involve more or less duplication of persons working in different industries at different times, would not represent the total number employed in all industries at any one time, and would give an undue weight to seasonal industries as compared with industries in continual operation.

In particular, totals by sex and age for the wage earners reported for the representative day would be misleading because of the undue weight given to seasonal industries, in some of which, such as canning and preserving, the distribution of the wage earners by sex and age is materially different from that in most industries of more regular operation. In order to determine as nearly as possible the sex and age distribution of the average number of wage earners in the state as a whole, the following procedure has been adopted:

The percentage distribution by sex and age of the wage earners in each industry, for December 15, or the nearest representative day, has been calculated from the actual numbers reported for that date. This percentage has been applied to the average number of wage earners for the year in that industry, to determine the average number of men, women, and children employed. These calculated averages for the several industries have been added up to give the average distribution for the state as a whole.

In 1899 and 1904 the schedule called for the average number of wage earners of each sex 16 years and over, and the total number under 16 years of age, for each month, and these monthly statements were combined in an annual average. Comparatively few manufacturing concerns, however, keep their books in such way as to show readily the number of men, women, and children (under 16) employed each month. These monthly returns by sex and age were, in fact, largely estimates. It was believed that a more accurate and reliable sex and age distribution could be secured by taking as a basis of estimate the actual numbers employed on a single day.

Prevailing hours of labor.—The census made no attempt to ascertain the number of employees working a given number of hours per week. The inquiry called merely for the prevailing practice followed in each establishment. Occasional variations in hours in an establishment from one period to another are disregarded, and no attention is given to the fact that a limited number of employees may have hours differing from those of the majority. In the tables

all the wage earners of each establishment are counted in the class within which the establishment itself falls. In most establishments, however, all or practically all the employees work the same number of hours, so that these figures give a substantially correct picture of the hours of labor in manufacturing industries.

Capital.—For reasons stated in prior census reports, the statistics of capital secured by the census canvass are so defective as to be without value, except as indicating very general conditions. The instructions on the schedule for securing capital were as follows:

The answer should show the total amount of capital, both owned and borrowed, on the last day of the business year reported. All the items of fixed and live capital may be taken at the amounts carried on the books. If land or buildings are rented, that fact should be stated and no value given. If a part of the land or buildings is owned, the remainder being rented, that fact should be so stated and only the value of the owned property given. Do not include securities and loans representing investments in other enterprises.

Materials.—Cost of materials refers to the materials used during the year, which may be more or less than the materials purchased during the year. The term materials includes fuel, rent of power and heat, mill supplies and containers, as well as materials forming a constituent part of the product. Fuel includes all fuel used, whether for heat, light, or power, or for the process of manufacture.

Expenses.—Under "Expenses" are included all items of expense incident to the year's business, except interest, whether on bonds or other forms of indebtedness, and allowances for depreciation.

Value of products.—The value of products for any industry includes the total value of all products manufactured in establishments whose products of chief value fall under the industry designation. The amounts given represent the selling value at the factory of all products manufactured during the year, which may differ from the value of the products sold. Amounts received for work on materials furnished by others are included.

Value added by manufacture.—The value of products is not a satisfactory measure of either the absolute or the relative importance of a given industry, because only a part of this value is actually created by the manufacturing process carried on in the industry itself. Another part of it, and often by far the larger part, represents the value of the materials used, which have been produced by agriculture or mining or by other industrial establishments. For many purposes, therefore, the best measure of the importance of different classes of industry is the value created as the result of the manufacturing operations carried on within the industry. This value is obtained by deducting the cost of the materials consumed from the value of the product. The figure thus obtained is termed in the census reports "value added by manufacture."

There is a further statistical advantage which "value added" has over gross value of products. In combining the value of products for all industries the value of products produced by one establishment and used as materials in another is duplicated, and the total, therefore, gives a greatly exaggerated idea of the wealth created. No such duplication takes place in the total "value added by manufacture."

Cost of manufacture and profits.—Census data do not show the entire cost of manufacture, and consequently can not be used to show profits. No account has been taken of interest and depreciation. Even if the amount of profit could be determined by deducting the expenses from the value of the products the rate of profit on the investment could not properly be calculated, because of the very defective character of the returns regarding capital.

Primary power.—The figures given for this item show the total of the primary power used by the establishments. They do not cover the power developed by motors operated by such power, the inclusion of which would evidently result in duplication.

Location of establishments.—The Census Bureau has classified establishments by their location in cities or classes of cities. In interpreting these figures due consideration should be given to the fact that often establishments are located just outside the bound-

aries of cities, and are necessarily so classified, though locally they are looked upon as constituting a part of the manufacturing interests of the cities.

Laundries.—The census of 1909 was the first to include statistics of laundries. The reports are confined to establishments using mechanical power. The data are presented separately and are not included in the general total for manufacturing indus-

tries, in order to avoid interference with comparisons with prior censuses.

Custom gristmills and sawmills.—In order to make the statistics for 1909 comparable with those for 1904 the data for these mills have been excluded from all the tables presenting general statistics, and are given in a separate table at the end of this chapter.

INDUSTRIES IN GENERAL.

General character of the state.—Vermont, with a gross area of 9,564 square miles, of which 440 represent water surface, is one of the smallest states in the Union, both in area and population. Its population in 1910 was 355,956, as compared with 343,641 in 1900 and 332,422 in 1890. It ranked forty-second among the 49 states and territories of continental United States as regards population in 1910 and thirty-ninth in 1900. In 1910 the density of population for the entire state was 39 persons per square mile, the corresponding figure for 1900 being 37.7. Forty-seven and five-tenths per cent of the total population of the state resided in incorporated places having a population of 2,500 or over, as against 40.5 per cent in 1900.

The state has three cities having a population of over 10,000—Burlington, Rutland, and Barre. These three cities contain only 12.6 per cent of the total population of the state and are credited with only 19.5 per cent of the total value of its manufactures. Apart from these cities 34.9 per cent of the population of the state resided in places of 2,500 inhabitants or over.

Vermont has good railroad service, and Lake Champlain furnishes excellent facilities for water transportation in the northwestern part of the state.

Importance and growth of manufactures.—The manufactures of the state have increased from a total value of products of \$8,571,000 in 1849 to \$51,515,000 in 1899 and \$68,310,000 in 1909. During 1849 an average of 8,445 wage earners, representing 2.7 per cent of the total population, were employed in manufactures, while in 1909 an average of 33,788 wage earners, or 9.5 per cent of the total population, were so engaged. During this period the gross value of products per capita of the total population of the state increased from \$27 to \$192. From 1849 to 1909, however, the proportion which the manufactures of the state represented of the total value of the products of manufacturing industries in the United States decreased somewhat. This proportion was eight-tenths of 1 per cent in 1849; five-tenths of 1 per cent in 1899; and three-tenths of 1 per cent in 1909. In 1849 the state ranked twenty-first in respect to value of manufactures; in 1899, thirty-fourth; and in 1909, thirty-eighth.

The following table gives the more important figures relative to all classes of manufactures combined for the state as returned at the censuses of 1909, 1904, and 1899, together with the percentages of increase from census to census:

	NUMBER OR AMOUNT.			PER CENT OF INCREASE. ¹	
	1909	1904	1899	1904-1909	1899-1904
Number of establishments.....	1,958	1,699	1,938	15.2	-12.3

Value added by manufacture (value of products less cost of materials).....	33,487,000	30,654,000	25,130,000	9.2	22.0

¹ A minus sign (-) denotes decrease.

² Figures not available.

In 1909 the state of Vermont had 1,958 manufacturing establishments, which gave employment to an average of 38,580 persons during the year, and paid out \$20,075,000 in salaries and wages. Of the persons employed, 33,788 were wage earners. These establishments turned out products to the

value of \$68,310,000, to produce which materials costing \$34,823,000 were used. The value added by manufacture was thus \$33,487,000, which figure, as explained in the Introduction, best represents the net wealth created by manufacturing operations during the year.

In general, this table brings out the fact that the manufacturing industries of Vermont, when measured by value of products and value added by manufacture, showed less development during the more recent five-year period, 1904-1909, than during the preceding five-year period, 1899-1904. The number of establishments, however, dropped from 1,938 in 1899 to 1,699 in 1904, but had increased to 1,958 by 1909. In the earlier period wages increased 33.2 per cent and the value of products 22.5 per cent, whereas in the more recent period they increased only 13.5 per cent and 8.3 per cent, respectively. As pointed out in the Introduction, it would be improper to infer that manufactures increased in volume to the

full extent indicated by these figures representing values, since the increase shown is certainly due, in part, to the increase that has taken place in the prices of commodities.

It is a matter of interest to note that the percentages of increase shown for wages, value of products, and value added by manufacture are much larger than the percentage of increase in the average number of wage earners. The only decrease shown in the table is that in the number of establishments during the period 1899-1904, amounting to 12.3 per cent.

The relative importance and growth of the leading manufacturing industries of the state are shown in the following table:

INDUSTRY.	Number of establishments.	WAGE EARNERS.		VALUE OF PRODUCTS.		VALUE ADDED BY MANUFACTURE.		PER CENT OF INCREASE. ¹			
		Average number.	Per cent distribution.	Amount.	Per cent distribution.	Amount.	Per cent distribution.	Value of products.		Value added by manufacture.

¹ Percentages are based on figures in Table I; a minus sign (-) denotes decrease. Where the percentages are omitted, comparable figures can not be given.

² Less than one-tenth of 1 per cent.

It should be borne in mind, in considering this table, that the value of products in some of the industries involves a certain amount of duplication, due to the fact that the product of one establishment often becomes the material for another establishment.

The most important industries listed in this table, in which they are arranged in the order of the value of products, call for brief consideration.

Marble and stone work.—Vermont possesses a practically unlimited supply of two of the most useful kinds of stone, marble and granite, and for years has ranked first among the states in the output of marble. There was an increase of 113 in the number of establishments in this industry between 1904 and 1909. The average number of wage earners increased 28.6 per cent; the

value of products, 29.5 per cent; and the value added by manufacture, 30.6 per cent. To this industry alone are credited nearly one-third of the total average number of wage earners and nearly one-fifth of the total value of manufactured products for the state.

Lumber and timber products.—The lumber industry, which was one of the first manufacturing industries started in the state, continues relatively important. It embraces establishments engaged in logging operations, and sawmills, planing mills, and wooden packing-box factories. There was a decrease during the five-year period 1904-1909 of 9.3 per cent in value of products and 7.3 per cent in value added by manufacture.

Butter, cheese, and condensed milk.—This industry is very important in the state. To avoid disclosure of individual operations the statistics for one condensed-milk establishment were omitted in 1904, for which reason the percentages of increase for the industry are not given in the preceding table. From 1899 to 1909, however, the total value of products increased \$2,456,000, or 43.4 per cent, and the value added by manufacture, \$285,000, or 37 per cent. The decrease in number of establishments from 255 in 1899 to 186 in 1909 was due to the abandonment of small local creameries and the establishment of larger central plants.

Textiles.—The textile manufactures of the state, including woolen and worsted goods, hosiery and knit goods, and cotton goods, are important as a whole, although each branch of the industry showed a general decrease during the five-year period 1904–1909. The manufacture of woolen and worsted goods, which is by far the most important of the textile industries in Vermont, decreased 4.3 per cent in value of products and 15 per cent in value added by manufacture from 1904 to 1909. The hosiery and knit-goods industry decreased during this period 12.2 per cent in value of products and 15 per cent in value added by manufacture. The statistics for the three establishments engaged in the cotton-goods industry are omitted, to avoid the disclosure of individual operations. No establishments were reported in the state as engaged primarily in making felt goods or wool hats and only one in manufacturing worsted goods.

Flour-mill and gristmill products.—This industry shows a steady growth during the decade. The industry is not very important, however, from the standpoint of the number of wage earners, giving employment to an average of only 156 persons. Owing to the comparatively simple processes involved and the extent to which these processes are carried on by machinery, the value added by manufacture is not commensurate with the gross value of products or the number of the establishments.

Paper and wood pulp.—The establishments which produce pulp as a final product, as well as those which manufacture paper or pulp and paper, are included under this classification. The industry has shown only small growth during the last five years.

The 13 leading industries measured by value of products hold a somewhat different rank when measured by value added by manufacture. Marble and stone work and the lumber industry continue to be the two most important industries of the state, but the foundry and machine-shop industry rises from seventh to third place. The woolen and worsted goods and the paper and wood-pulp industries both become of more importance than the manufacture of butter, cheese, and condensed milk, ranking fourth, fifth, and sixth, respectively. Furniture and refrigerators, printing and publishing, patent medicines, and men's clothing

take seventh, eighth, ninth, and tenth places, respectively, while the hosiery and knit-goods industry drops from eighth to eleventh place. The car repair shops of steam railroads hold the same position when measured by value added by manufacture as when measured by value of products. The flour-mill and gristmill industry falls from fifth to thirteenth place.

This table shows also the percentages of increase for these leading industries in respect to value of products and value added by manufacture where these statistics are comparable. Four of the 13 leading industries decreased from 1904 to 1909 in value of products and 5 in value added by manufacture. The flour-mill and gristmill industry showed a greater rate of increase from 1904 to 1909 in value added by manufacture than any other of these industries, namely, 81.1 per cent, while during the same period the steam-railroad repair shop industry showed the greatest rate of increase in value of products, 32 per cent.

In addition to the industries presented separately there are 19 other industries which had a value of products in 1909 in excess of \$100,000, but which are included in all other industries in the table. In the case of 2 of these industries—the manufacture of food preparations and the turning and carving of wood—the returns do not present properly the true condition of the industry, as it is more or less interwoven with one or more other industries of similar character. The other 17 industries are included under this head, to avoid disclosing the operations of individual establishments. These industries are: Boots and shoes, including cut stock and findings; brushes; coffins, burial cases, and undertakers' goods; cotton goods, including cotton small wares; cutlery and tools, not elsewhere specified; dairymen's, poulterers', and apiarists' supplies; firearms and ammunition; furnishing goods, men's; grease and tallow; leather, tanned, curried, and finished; musical instruments, pianos and organs and materials; paper goods, not elsewhere specified; photographic apparatus and materials; scales and balances; shoddy; toys and games; and window shades and fixtures. Statistics, however, for cutlery and tools and musical instruments are shown in Table II for 1909.

Persons engaged in manufacturing industries.—The next table shows, for 1909, the distribution of the number of persons engaged in manufactures, the average number of wage earners being distributed by sex and age. It should be borne in mind, however, that the sex and age classification of the average number of wage earners in this and other tables is an estimate obtained by the method described in the Introduction.

The average number of persons engaged in manufactures during 1909 was 38,580, of whom 33,788 were wage earners. Of the remainder, 3,088 were proprietors and officials and 1,704 were clerks. Corresponding figures for individual industries will be found in Table II, page 628.

CLASS.	PERSONS ENGAGED IN MANUFACTURES.		
	Total.	Male.	Female.
All classes.....	38,580	33,305	5,275
Proprietors and officials.....	3,088	3,013	75
Proprietors and firm members.....	2,113	2,053	60
Salaried officers of corporations.....	302	293	9
Superintendents and managers.....	673	667	6
Clerks.....	1,704	1,202	502
Wage earners (average number).....	33,788	29,090	4,698
16 years of age and over.....	33,577	28,946	4,631
Under 16 years of age.....	211	144	67

The following table shows, for 1909, the percentages of proprietors and officials, clerks, and wage earners, respectively, among the total number of persons employed in manufactures. It covers all industries combined and 13 important industries individually.

INDUSTRY.	PERSONS ENGAGED IN MANUFACTURES.			
	Total number.	Per cent of total.		
		Pro- rietors and officials.	Clerks.	Wage earners (average number).
All industries.....	38,580	8.0	4.4	87.6
Butter, cheese, and condensed milk.....	999	20.9	4.9	74.2
Cars and general shop construction and repairs by steam-railroad companies.....	1,023	1.9	1.2	97.0
Clothing, men's, including shirts.....	1,359	2.1	3.7	94.3
Flour-mill and gristmill products.....	350	50.9	4.6	44.6
Foundry and machine-shop products.....	2,141	5.9	7.2	86.9
Furniture and refrigerators.....	1,226	3.9	4.8	91.3
Hosiery and knit goods.....	974	1.7	1.1	97.1
Lumber and timber products.....	5,720	14.7	1.5	83.7
Marble and stone work.....	11,545	6.5	3.4	90.2
Paper and wood pulp.....	1,133	5.3	3.3	90.9
Patent medicines and compounds and druggists' preparations.....	269	10.4	29.7	59.9
Printing and publishing.....	910	16.8	10.3	72.5
Woolen, worsted, and felt goods, and wool hats.....	2,371	1.4	1.8	96.8
All other industries.....	8,851	7.4	7.1	85.4

Of the total number of persons engaged in all manufacturing industries, 8 per cent were proprietors and officials, 4.4 per cent clerks, and 87.6 per cent wage earners. In the flour-mill and gristmill industry the majority of the establishments are small and the work is done to a large extent by the proprietors or their immediate representatives, so that the proportion of persons engaged in this industry falling in the class of proprietors and officials is very much higher than for other industries or for all industries combined. The percentage of proprietors and officials is also relatively high in the butter, cheese, and condensed-milk, the lumber, and the printing and publishing industries, where the small establishment predominates.

The following table shows, for 1909, in percentages, for all industries combined, the distribution of the average number of wage earners by age periods, and for those 16 years of age and over by sex, calculated in the manner described in the Introduction. It also

shows, for some of the important industries separately, a similar distribution of wage earners as reported for December 15, or the nearest representative day. As a means of judging the importance of the several industries, the average total number employed for the year is also given in each case.

INDUSTRY.	WAGE EARNERS.			
	Average number. ¹	Per cent of total.		
		16 years of age and over.		Under 16 years of age.
Male.	Female.			
All industries.....	33,788	85.7	13.7	0.6
Butter, cheese, and condensed milk.....	519	95.4	4.2	0.4
Cars and general shop construction and repairs by steam-railroad companies.....	992	100.0		
Clothing, men's, including shirts.....	1,281	11.0	89.0

Patent medicines and compounds and druggists' preparations.....	161	44.1	55.9	
Printing and publishing.....	666	70.9	28.8	0.3
Woolen, worsted, and felt goods, and wool hats.....	2,294	60.9	37.6	1.4
All other industries.....	7,563	78.3	20.1	1.6

¹ For method of estimating the distribution, by sex and age periods, of the average number in all industries combined, see Introduction.

² Less than one-tenth of 1 per cent.

For all industries combined, 85.7 per cent of the average number of wage earners were males 16 years of age and over; 13.7 per cent, females 16 years of age and over; and six-tenths of 1 per cent, children under the age of 16. It will be noted that in three industries, the manufacture of men's clothing, hosiery and knit goods, and patent medicines and compounds, the women outnumbered the men. In the men's clothing industry nearly nine-tenths of the wage earners were women. The wage earners under 16 years of age in Vermont are employed principally in marble and stone work, and in the woolen and the lumber industries.

In order to compare the distribution of persons engaged in manufactures in 1909 with that shown at the census of 1904, it is necessary to use the classification employed at the earlier census. (See Introduction.) The following table makes this comparison according to occupational status:

CLASS.	PERSONS ENGAGED IN MANUFACTURES.				
	1909		1904		Per cent of increase: 1904-1909
	Number.	Per cent distribution.	Number.	Per cent distribution.	
Total.....	38,580	100.0	37,015	100.0	4.8
Proprietors and firm members.....	2,113	5.5	1,850	5.0	13.8
Salaried employees.....	2,679	6.9	2,053	5.5	30.6
Wage earners (average number).....	33,788	87.6	33,106	89.4	2.1

Comparable figures are not obtainable for 1899. The table shows a greater percentage of increase in the salaried employees than in the other two classes.

The following table shows the average number of wage earners, distributed according to age periods, and in the case of those 16 years of age and over according to sex, for 1909, 1904, and 1899. The averages for 1909 are estimated on the basis of the actual number reported for a single representative day. (See Introduction.)

CLASS.	AVERAGE NUMBER OF WAGE EARNERS.					
	1909		1904		1899	
	Number.	Per cent distribution.	Number.	Per cent distribution.	Number.	Per cent distribution.
Total.....	33,788	100.0	33,106	100.0	28,179	100.0
16 years of age and over..	33,577	99.4	32,890	99.3	27,927	99.1
Male.....	28,946	85.7	28,321	85.5	23,954	85.0
Female.....	4,631	13.7	4,569	13.8	3,973	14.1
Under 16 years of age....	211	0.6	216	0.7	252	0.9

This table indicates that for all industries combined there has not been much change in the proportions of male and female wage earners 16 years of age and over. In 1909 males 16 years of age and over formed 85.7 per cent of all wage earners, as compared with 85.5 per cent in 1904 and 85 per cent in 1899.

Wage earners employed, by months.—The following table gives the number of wage earners employed on the 15th of each month during the year 1909, for all industries combined, for the lumber and the marble and stone work industries, and for all other industries combined; it gives also the percentage which the number reported for each month is of the greatest number reported for any month. The wage earners for the lumber industry are divided in the table in such a manner as to show separately the number engaged in the mills and in the logging operations. In Table II, page 628, are shown, for practically all of the important industries in the state, the largest number and the smallest number of wage earners reported for any month. The figures are for the 15th day, or the nearest representative day, of the month.

MONTH.	WAGE EARNERS.												
	All industries.	Lumber and timber products.						Marble and stone work.		All other industries.			
		Number.	Per cent of maximum.	Total.		In mills.		In logging operations.		Number.	Per cent of maximum.	Number.	Per cent of maximum.

August.....	33,359	96.2	3,866	70.8	3,382	72.6	484	24.5	11,186	100.0	18,307	93.8	
September.....	34,098	98.3	4,200	76.9	3,504	75.2	696	35.2	11,117	99.4	18,781	96.3	
October.....	34,392	99.2	4,535	83.1	3,525	75.6	1,010	51.1	10,800	97.1	18,997	97.4	
November.....	34,677	100.0	5,020	91.9	3,424	73.5	1,596	80.7	10,294	92.0	19,363	99.2	
December.....	32,342	93.3	5,460	100.0	3,482	74.7	1,978	100.0	7,372	65.9	19,510	100.0	

The periods of maximum employment in the two important industries shown separately in the table occur at different seasons, and to a large extent the fluctuations in one industry balance those in the other. For this reason there is no great variation in the total number of wage earners for the different months of the year. The greatest activity in logging operations took place during the winter months, reaching the maximum in December. In the mills, however, the conditions were reversed, the greatest number of wage earners being reported for the spring and summer months. In the marble and stone work industry the number increased gradually from January to August, after which there was a decline to the end of the year, the small proportion shown for December being due to

labor troubles, and was sufficient to cause this month to show the minimum employment for all industries combined. The decrease from August to December was 34.1 per cent. For all industries combined the greatest number of wage earners were employed in November and the smallest number in December.

Prevailing hours of labor.—In the next table wage earners have been classified according to the hours of labor prevailing in the establishments in which they are employed. In making this classification the average number of wage earners employed during the year 1909 is used; and the number employed in each establishment is classified as a total, according to the hours prevailing in that establishment, even though a few employees work a greater or less number of hours.

INDUSTRY.	AVERAGE NUMBER OF WAGE EARNERS IN ESTABLISHMENTS GROUPED ACCORDING TO PREVAILING HOURS OF WORK PER WEEK.								
	Total.	48 and under.	Between 48 and 54.	54.	Between 54 and 60.	60.	Between 60 and 72.	72.	Over 72.

All other industries.....	5,104	43	104	1,345	1,268	2,325	14	2	3

It is evident from these figures that for the great majority of wage earners employed in the manufacturing industries of Vermont the prevailing hours of labor range from 54 to 60 per week, only 17.7 per cent of the total being employed in establishments where the employees work less than 54 per week, and 1.9 per cent in establishments whose employees work more than 60 per week.

In the marble and stone work industry, in which nearly one-third of the total number of wage earners for the state are employed, the prevailing hours of labor are 48 per week and under for 38.2 per cent of the wage earners, between 54 and 60 per week for 50.4 per cent, and 60 per week (which is the maximum for the industry) for 3.3 per cent. The prevailing hours in the steam-railroad car repair shops and in establishments making men's and women's clothing are between 54 and 60 per week. In the bakery, canning and preserving, cooperage, flour-mill and gristmill, hosiery, lumber, and woolen-goods industries the prevailing hours of labor are 60 per week. In the furniture industry about one-half the wage earners work 60 hours per week, and the rest either 54 or between 54 and 60; and in the butter and cheese industry a majority of the wage earners work over 60 hours per week.

Location of establishments.—The next table shows the extent to which the manufactures of Vermont are centralized in cities of 10,000 population or over. (See Introduction.) The statistics for 1904 are omitted from this table, because there was no Federal census of population for that year, and it was impossible to determine the cities that come within the group having over 10,000 inhabitants.

ITEM.	Year.	Total.	LOCATION OF ESTABLISHMENTS.		PER CENT OF TOTAL.	
			In cities with population of 10,000 and over.	Outside districts.	In cities with population of 10,000 and over.	Outside districts.
Population.....	1910	855,956	44,748	311,208	12.6	87.4
	1900	343,641	30,139	313,502	8.8	91.2
Number of establishments.	1909	1,958	284	1,674	14.5	85.5
	1899	1,938	139	1,799	7.2	92.8
Average number of wage earners.	1909	33,788	6,347	27,441	18.8	81.2
	1899	28,179	3,723	24,451	13.2	86.8
Value of products....	1909	\$68,309,824	\$13,332,195	\$54,977,629	19.5	80.5
	1899	51,615,228	8,025,240	43,489,988	15.6	84.4
Value added by manufacture.	1909	33,487,096	6,603,974	26,793,122	20.0	80.0
	1899	25,130,416	3,895,818	21,234,598	15.5	84.5

In 1909, 19.5 per cent of the total value of products and 18.8 per cent of the average number of wage earners were reported from the three cities having over 10,000 inhabitants in 1910. The figures indicate that while little relative change took place during the 10 years in the amount of manufacturing done in cities of 10,000 and over and in districts outside, yet on the whole the manufactures of the cities have gained considerably on those of the districts outside. This is due to some extent to the increase in the population of Barre, which city had less than 10,000 inhabitants in 1900, and so was included in the districts outside in 1899.

The population for 1910 and 1900 of the three cities which had 10,000 inhabitants or over in 1910 is given in the following statement:

CITY.	1910	1900
Burlington.....	20,468	18,640
Rutland.....	13,546	11,499
Barre.....	10,734	8,448

The relative importance in manufactures of each of these three cities is shown in the following table, in which the average number of wage earners and the value of products are shown separately for 1909, 1904, and 1899:

CITY.	AVERAGE NUMBER OF WAGE EARNERS.			VALUE OF PRODUCTS.		
	1909	1904	1899	1909	1904	1899
Burlington.....	2,371	2,300	2,232	\$6,800,490	\$6,355,764	\$6,066,184
Barre.....	2,340	2,198	1,875	3,862,177	3,373,046	2,760,862
Rutland.....	1,636	1,803	1,496	2,679,628	2,522,866	1,959,056

Each of the three cities shows an increase in value of products both from 1899 to 1904 and from 1904 to 1909. Burlington and Barre show increases in the average number of wage earners reported during each of the five-year periods, while Rutland shows a decrease in the average number of wage earners from 1904 to 1909.

The percentage of increase in value of products for Burlington was 4.8 per cent from 1899 to 1904 and 7 per cent from 1904 to 1909. The increase during the latter period was due principally to the establishment of a new furniture factory and an increase in the production of establishments manufacturing men's clothing, cotton goods, and photographic materials.

The value of products manufactured in Rutland increased but 6.2 per cent from 1904 to 1909, whereas the increase from 1899 to 1904 was 28.8 per cent. The leading industries in 1909 were the manufacture of scales and balances, the foundries and machine shops, and the steam-railroad car repair shops.

In 1909 and in 1904 the leading industry in Barre was marble and stone work, which in both years contributed about nine-tenths of the value of all its manufactured products. The marble and stone work produced in Barre in 1909 represented more than one-fourth of the total value of the products for this industry in the state.

Character of ownership.—The table that follows has for its purpose the presentation of conditions in respect to the character of ownership, or legal organization, of manufacturing enterprises. For all industries combined comparative figures are given covering the censuses of 1909 and 1904. Comparative data for 1899 are not available. Figures for 1909 only are presented for several important industries individually. In order to avoid disclosing operations of individual concerns, it is necessary to omit several important industries from this table and the one following.

INDUSTRY AND CHARACTER OF OWNERSHIP.	Number of establishments.	Average number of wage earners.	Value of products.	Value added by manufacture.

¹ Includes the group "Individual," to avoid disclosure of individual operations.

The most important distinction shown is that between corporate and all other forms of ownership. For all industries combined, 19 per cent of the total number of establishments were in 1909 under corporate ownership, as against 81 per cent under all other forms. The corresponding figures for 1904 were 18.2 per cent and 81.8 per cent, respectively. In the other three items shown in this table the totals for establishments operated by corporations show a decided increase. Decreases are shown in the proportions of the total number of wage earners, value of products, and value added by manufacture reported by establishments under individual and firm ownership and the forms of ownership included under the head of "Other," except that the establishments under "Other" forms of ownership report a slightly larger proportion of the total value added by manufacture.

The forms of ownership prevailing in the different industries varied considerably. Unlike other important industries, the largest percentage of the marble

and stone works were owned by firms, only 15.8 per cent being under corporate ownership. In the butter, cheese, and condensed-milk industry the most common form of ownership was the cooperative, classed under "Other" forms of ownership in the table. These cooperative establishments are operated largely by farmers who have organized for the purpose of securing steadier and better markets for their milk.

Size of establishment.—The tendency for manufacturing to become concentrated in large establishments, or the reverse, is a matter of interest from the standpoint of industrial organization. In order to throw some light upon it the following table groups the establishments according to the value of their products. The table shows also the average size of establishments for all industries combined and for important industries separately as measured by number of wage earners, value of products, and value added by manufacture. The totals for all industries are shown for the last two censuses, while for certain important industries figures are given for 1909 only.

INDUSTRY AND VALUE OF PRODUCTS.	Number of establishments.	Average number of wage earners.	Value of products.	Value added by manufacture.	INDUSTRY AND VALUE OF PRODUCTS.	Number of establishments.	Average number of wage earners.	Value of products.	Value added by manufacture.

¹ Includes the group "\$1,000,000 and over."

This table shows that, in 1909, of the 1,958 manufacturing establishments in the state, 131, or 6.7 per cent, had a value of products exceeding \$100,000. These establishments, however, employed an average of 19,353 wage earners, or 57.3 per cent of the total number in all establishments, and reported 57.5 per cent of the total value of products and 56.7 per cent of the total value added by manufacture.

On the other hand, the very small establishments—that is, those having a value of products of less than \$5,000—constituted a considerable proportion (35.2 per cent) of the total number of establishments, but the value of their products amounted to only 2.5 per cent of the total. The bulk of the manufacturing was reported by establishments having products valued at not less than \$100,000.

It will be seen from the above table that during the five years from 1904 to 1909 there was a considerable increase as measured by value of products in the relative importance of the establishments

having a value of products between \$100,000 and \$1,000,000.

The decrease in the average value of products per establishment from \$37,130 to \$34,888, and in value added by manufacture from \$18,042 to \$17,103, during the five-year period, is due to the large increase in the number of small establishments—those reporting products valued at less than \$5,000. There was also a decrease from 19 to 17 in the average number of wage earners per establishment.

In some respects, and especially from the standpoint of conditions under which persons engaged in manufactures work, the best classification of establishments to bring out the feature of size is a classification according to the number of wage earners employed. The next table shows, for 1909, such a classification for all industries combined and for 13 important industries individually, and gives not only the number of establishments falling in each group, but also the average number of wage earners employed.

INDUSTRY.	Total.	ESTABLISHMENTS EMPLOYING—								
		No wage earners.	1 to 5 wage earners.	6 to 20 wage earners.	21 to 50 wage earners.	51 to 100 wage earners.	101 to 250 wage earners.	251 to 500 wage earners.	501 to 1,000 wage earners.	Over 1,000 wage earners.

All other industries.....	100.0		6.9	13.1	17.0	11.2	17.3	24.1	10.6	

Of the 1,958 establishments reported for all industries, 6.7 per cent employed no wage earners; 56.2 per cent, from 1 to 5; 21.1 per cent, 6 to 20; 10.1 per cent, 21 to 50; and 5.9 per cent, over 50. The most numerous single group consists of the 1,100 establishments employing from 1 to 5 wage earners each, and the next of the 414 establishments employing from 6 to 20 wage earners each. There were 19 establishments that employed over 250 wage earners each; two of these, one a marble yard and the other a woolen mill, employed over 1,000 wage earners each.

Of the total number of wage earners, 48.6 per cent were in establishments employing over 100 wage earners each. No one of the groups in the table greatly predominates. The single group having the largest number of wage earners is the group comprising the establishments employing from 21 to 50 wage earners each, although the two groups of establishments employing from 101 to 250 wage earners and from 251 to 500 wage earners, respectively, had each nearly as large a percentage of the total.

Expenses.—As stated in the Introduction, the census does not purport to furnish figures that can be used for determining the cost of manufacture and profits. Facts of interest can, however, be brought out concerning the relative importance of the different classes of expenses which make up the total.

The following table shows, for 1909, in percentages, the distribution of expenses among the classes indicated for all industries combined and for certain important industries separately. The figures on which the percentages are based appear in Table II, page 628.

INDUSTRY.	PER CENT OF TOTAL EXPENSES REPORTED.			
	Salaries.	Wages.	Materials.	Miscellaneous expenses.
All industries	4.7	28.9	58.2	8.3
Butter, cheese, and condensed milk.....	0.6	3.8	92.6	3.0
Cars and general shop construction and repairs by steam-railroad companies.....	2.8	48.2	46.6	2.4
Clothing, men's, including shirts.....	7.3	36.4	51.8	5.5
Flour-mill and gristmill products.....	0.7	2.1	96.9	1.3
Foundry and machine-shop products.....	9.6	35.2	43.3	12.0
Furniture and refrigerators.....	8.1	34.1	48.1	9.6
Hosiery and knit goods.....	2.7	24.8	65.9	6.6
Lumber and timber products.....	2.7	27.9	57.2	12.1
Marble and stone work.....	6.0	62.0	24.4	7.7
Paper and wood pulp.....	4.1	17.1	70.9	7.9
Patent medicines and compounds and druggists' preparations.....	10.1	6.2	54.2	29.5
Printing and publishing.....	14.8	38.3	29.4	17.5
Woolen, worsted, and felt goods, and wool hats.....	2.0	24.1	66.5	7.3
All other industries.....	6.9	27.4	50.0	9.7

This table shows that, for all industries combined, 58.2 per cent of the total expense was incurred for materials, 33.6 per cent for services—that is, salaries and wages—and but 8.3 per cent for other purposes. As would be expected, the proportions vary greatly in the different industries.

Engines and power.—The following table shows, for all industries combined, the number of engines or other motors, according to their character, employed in generating power (including electric motors operated by purchased current), and their total horsepower at the censuses of 1909, 1904, and 1899. It also shows

separately the number and horsepower of electric motors, including those operated by current generated in the manufacturing establishments.

POWER.	NUMBER OF ENGINES OR MOTORS.			HORSEPOWER.			PER CENT DISTRIBUTION OF HORSEPOWER.		
	1909	1904	1899	1909	1904	1899	1909	1904	1899

* Includes the neighborhood industries and hand trades, omitted in 1904 and 1909.
 † Not reported.

This table shows an increase in primary power of 18,829 horsepower, or 13.4 per cent, from 1904 to 1909. Owned power increased 11,144 horsepower, of which 66.6 per cent was in steam power and 25.5 per cent in power derived from water wheels. The figures show that the practice of renting power is on the increase, 8.5 per cent of the total power being rented in 1909, as compared with 4.2 per cent in 1904 and 2.5 per cent in 1899. The use of electric motors for the purpose of applying the power generated within the establishments is also shown to be increasing rapidly, the number of such motors having increased from 24 in 1899 to 110 in 1904 and 672 in 1909, and their horsepower increasing from 729 in 1899 to 2,688 in 1904 and 8,316 in 1909.

Fuel.—Closely related to the question of the kind of power employed is that of the fuel consumed in generating this power, or otherwise used as material in the manufacturing processes. The following table shows the quantity of each kind of fuel used in 1909:

INDUSTRY.	Anthracite coal (tons).	Bituminous coal (tons).	Coke (tons).	Wood (cords).	Oil, including gasoline (barrels).	Gas (1,000 feet).

NOTE.—In addition, there were 202 tons of other varieties of fuel reported.

SUPPLEMENTARY DATA REGARDING IMPORTANT INDUSTRIES.

(With statistics for laundries and custom sawmills and gristmills.)

For certain industries the Census Bureau collects, by means of special schedules, details regarding the quantity and cost of materials and the quantity and value of products and other information for securing which no provision is made on the general schedule. Certain data of this character for three important industries in Vermont are here presented.

Lumber and timber products.—With the exception of the marble and stone work industry, the lumber industry in Vermont is the most important one in the state, whether measured by average number of wage earners, value of products, or value added by manufacture, while in number of establishments it ranks first. The quantity of lumber, lath, and shingles produced in the sawmill branch of this industry in 1909 and 1899 is shown in the following statement:

PRODUCT.	QUANTITY.	
	1909	1899
Rough lumber.....M feet b. m..	351,571	375,809
Lath.....thousands..	7,249	9,314
Shingles.....thousands..	24,001	52,899

The returns for 1909, as compared with 1899, show decreases of 6.4 per cent in the output of lumber, 22.2 per cent in that of lath, and 54.6 per cent in that of shingles. The principal kinds of lumber produced are spruce, hemlock, white pine, and birch. In 1909, of the total cut of 351,571 M feet board measure, the softwoods represented 242,930 M feet board measure, of which spruce constitutes 123,164 M feet, hemlock 62,345 M feet, and white pine 43,274 M feet. Of the 108,641 M feet of hardwoods, birch represented 33,450 M feet, maple 27,533 M feet, and oak 11,463 M feet board measure.

Butter, cheese, and condensed milk.—Vermont is one of the leading dairy-product states, ranking ninth in respect to number of establishments and tenth in value of products. The quantity and value of products of the butter, cheese, and condensed-milk industry for 1909, 1904, and 1899 are given in the next table.

The value of products for this industry shows an increase both from 1904 to 1909 and from 1899 to 1904. The total value of butter, packed solid and in prints and rolls, represented 74.2 per cent of the total value of products of the industry in 1909, 91.1 per cent in 1904, and 83.3 per cent in 1899. From 1899 to 1904 there was an increase both in the total quantity and in the total value of butter produced, while from 1904 to 1909 there was an increase in value notwithstanding a marked decrease in quantity. In 1899, 22.7 per cent of the butter produced was put up in prints and rolls, and in 1909, 37.8 per cent. A number of the factories purchased cream at their "central stations" for resale, using only a part of it

for manufacturing purposes, because it is often more profitable to dispose of it as cream.

In the manufacture of cheese, there was between 1904 and 1909 a decrease of 36.4 per cent in quantity and of 7.4 per cent in value. The quantity and value of condensed milk produced in 1909, however, was about seven times that reported in 1899. The increasing custom of the farmers to separate the cream on the farm instead of sending the whole milk to the factory is apparent, since only 123 cream separators were reported as operated by factories in 1909, compared with 307 in 1904 and 382 in 1899.

² Figures can not be shown without disclosing individual operations.

³ No separation made in 1899 of sweetened and unsweetened condensed milk.

Flour-mill and gristmill products.—The following tabular statement gives the quantity and value of flour-mill and gristmill products for the last three census years:

PRODUCT.	1909	1904	1899
Total value	\$4,133,337	\$3,206,075	\$2,769,648
Wheat flour:			
White—			
Barrels.....	90	2,007	3,909
Value.....	\$540	\$10,240	\$15,358
Graham—			
Barrels.....	79	1,019
Value.....	\$474	\$4,424
Corn meal and corn flour:			
Barrels.....	853,051	909,700	898,803
Value.....	\$2,511,964	\$2,109,276	\$1,852,761
Rye flour:			
Barrels.....	404	305	1,159
Value.....	\$1,466	\$1,594	\$4,111
Buckwheat flour:			
Pounds.....	363,550	196,350	529,394
Value.....	\$9,370	\$5,825	\$12,313
Feed:			
Tons.....	48,850	40,461	36,722
Value.....	\$1,528,928	\$1,032,712	\$791,685
Offal:			
Tons.....	12	168	4,850
Value.....	\$493	\$3,380	\$70,251
All other products.....	\$80,216	\$38,624	\$22,669

There was an increase of 28.9 per cent in the total value of products between 1904 and 1909. This was due chiefly to the increase shown for corn meal and corn flour, amounting to \$402,688, or 19.1 per cent, and for feed, amounting to \$496,216, or 48 per cent. The amount of wheat and rye milled in the state is insignificant. Barley meal, of which a considerable quantity is manufactured in Vermont, is included under the head of "All other products."

Woolen and worsted goods.—From 1904 to 1909 there was a decrease in this industry in Vermont, due to the falling off in the manufacture of woolen goods. Similar conditions prevailed in most other textile manufacturing states in the Union, but the loss in woolen goods was overcome by the increase in the production of worsted goods. The quantity and cost of the different materials used, and the quantity and value of the various classes of products, reported at the censuses of 1909, 1904, and 1899, are given in the following statement:

MATERIAL OR PRODUCT.	1909	1904	1899 ¹
Materials used, total cost.	\$2,879,001	\$2,794,111	\$1,554,525
Wool (in condition purchased):

Value.....	\$996,882	\$1,131,645	\$348,434
All other products.....	\$65,724	\$8,836	\$21,273

¹ Excluding statistics for one establishment, to avoid disclosure of individual operations.

Although the cost of all materials, the quantity and cost of yarns purchased, and the cost of fuel and rent of power increased, all other items decreased from 1904 to 1909, while during the preceding five-year period every item of materials increased. The cost of yarns purchased was the largest item of materials used in 1909, constituting 37.6 per cent of the total cost of all materials, whereas the cost of wool was the largest in 1904 and in 1899. This condition indicates a change of methods in the industry.

With the exception of minor increases in the value of all-wool woven goods and the value of the articles included under the head "All other products," each item of products decreased from 1904 to 1909, while every item except "All other products" increased from 1899 to 1904. All-wool woven goods was the

largest class of products at each of the three censuses, the value of which represented 64.5 per cent of the total reported for the industry in 1909, 58.3 per cent in 1904, and 65.4 per cent in 1899.

A total of 51,404 producing spindles were reported by the woolen and worsted mills of Vermont in 1909, compared with 50,738 in 1904 and 37,460 in 1899. The total number of looms used in the same class of establishments was 1,297 in 1909, 965 in 1904, and 775 in 1899.

Laundries.—Statistics for steam laundries are not included in the general tables or in the totals for manufacturing industries. In 1909 there were 32 such establishments distributed through the state of Vermont, only 7 being in cities of 10,000 inhabitants and over.

The following statement summarizes the statistics:

Number of establishments.....	32
Persons engaged in the industry.....	342
Proprietors and firm members.....	37
Salaried employees.....	6
Wage earners (average number).....	299
Primary horsepower.....	349
Capital.....	\$144,393
Expenses.....	155,436
Services.....	104,769
Materials.....	32,217
Miscellaneous.....	18,450
Amount received for work done.....	243,753

The most common form of organization was the individual, for which 27 establishments were reported, the other 5 being operated by firms. Fourteen had receipts for the year's business of less than \$5,000; 17, \$5,000 but less than \$20,000; and 1, over \$20,000.

The number of wage earners employed each month and the per cent which this number represented of the greatest number employed in any month were as follows:

MONTH.	WAGE EARNERS.		MONTH.	WAGE EARNERS.	
	Number.	Per cent of maximum.		Number.	Per cent of maximum.
January.....	274	81.8	July.....	337	100.0
February.....	269	79.8	August.....	331	98.2
March.....	270	80.1	September.....	313	92.0
April.....	285	84.6	October.....	309	91.7
May.....	296	87.8	November.....	290	86.1
June.....	315	93.5	December.....	295	87.5

The different kinds of primary power, the number of engines or motors, and the horsepower used in 1909 are shown in the following tabular statement:

KIND.	Number of engines or motors.	Horsepower.
Primary power, total.		349
Owned:		
Steam.....	25	233
Gas.....	2	11
Water wheels.....	1	20
Water motors.....	1	2
Rented:		
Electric.....	10	43
Other.....		10

The kind and amount of fuel used by the laundries from which returns were received are shown in the following statement:

KIND.	Unit.	Quantity.
Anthracite coal.....	Tons.....	313
Bituminous coal.....	Tons.....	2,225
Oil.....	Barrels.....	63
Coke.....	Tons.....	24
Gas.....	1,000 feet.....	1,070
Wood.....	Cords.....	218

Custom sawmills and gristmills.—Statistics for custom sawmills and gristmills are not included in the general tables or in the totals shown for manufac-

turing industries, but are presented in the following summary:

	Custom sawmills.	Custom gristmills.
Number of establishments.....	61	35
Persons engaged in the industry.....	184	51
Proprietors and firm members.....	74	35
Salaried employees.....	1
Wage earners (average number).....	109	16
Primary horsepower.....	3,340	1,906
Capital.....	\$147,198	\$61,076
Expenses.....	51,248	169,953
Services.....	41,991	3,227
Materials.....	1,865	¹ 165,181
Miscellaneous.....	7,392	1,555
Value of products.....	86,398	¹ 197,514

¹ Includes estimate of all grain ground. A similar estimate for value of lumber sawed by custom sawmills is impracticable.

TABLE I.—COMPARATIVE SUMMARY FOR 1909, 1904, AND 1899.

CHAPTER 5.

MINES AND QUARRIES.

Introduction.—The present chapter contains a complete statement of the statistics of all mining industries, which include all mines and quarries, in the state of Vermont for the year 1909, as shown by the Thirteenth Census.

A brief explanation of the scope of the census of mining industries and of the terms used, in so far as the usage differs from that followed in the census of manufactures, is presented below in order to prevent any misinterpretation of the statistics.

The explanations here given show the usage of the mining census generally, though some of the special rules have obviously no relation to particular states in which the industries referred to do not exist.

Scope of census.—The Thirteenth Census covered all classes of mines, quarries, and petroleum and gas wells that were in operation during any portion of the year 1909, both those which were producing and those whose operations were confined to development work. Mines, quarries, or wells that were idle during the entire year 1909 were omitted from the canvass. The following operations were likewise omitted from the canvass: Prospecting; the digging or dredging of sand and gravel for the construction of roads and for building operations; the production of mineral waters; and the operation of small bituminous coal banks producing less than 1,000 tons annually. Where the mineral products are not marketed in their crude condition, but are dressed or washed at the mine or quarry, the statistics of mining cover the entire work of obtaining the crude material and its preparation for the market.

Period covered.—The returns cover the calendar year 1909, or the business year which corresponds most nearly to that calendar year. The statistics cover a year's operations, except for enterprises which began or discontinued business during the year.

Number of operators.—As a rule, the unit of enumeration was the "operator." Every individual, firm, or corporation was required to furnish one report for all mines, quarries, or wells which were operated under the same management or for which one set of books of account was kept. Separate reports were obtained for all properties operated in different states, even where they were owned by the same operator. Likewise, where the operations of one individual, firm, or corporation covered more than one class of mines and quarries, such as coal, iron, limestone, etc., a separate report was received for each industry.

Number of mines, quarries, and wells.—This figure represents the total number of mines and quarries in operation or in the course of development at any time during the calendar year 1909, or the business year that corresponds most nearly to that calendar year, and the number of completed petroleum and natural gas wells in operation on December 31, 1909.

In most mining and quarrying industries the number of mines or quarries varies but little from the number of operators.

Expenses of operation and development.—A certain amount of development work is incidental to the operation of every mine. The expenses reported for producing mines include the cost both of operation and of development work which was done in connection with operation.

Wages.—The amount shown as wages includes only the compensation of regular wage earners hired by the day, week, or month, or under the piecework system.

Supplies and materials.—This item includes the cost of lumber and timber used for repairs, mine supports, track ties, etc.; iron and steel for blacksmithing; rails, frogs, sleepers, etc., for tracks and repairs; renewals of tools and machinery and materials for repairs; and supplies, explosives, oil, etc., as well as the cost of fuel and the rent of power. The schedule called only for the cost of such supplies and materials as had been used during the year covered by the report. Accurate figures, however, could be furnished only in those cases where the operators kept an account of supplies and materials used, or had an inventory made of all in stock at the beginning and at the end of the year. Such a system of accounting is far from general among mine operators, and there is reason to believe that in many cases the reported cost of supplies and materials covered all purchased during the year rather than those used during the year. The crude product of some operators was purchased by others for further dressing or refining; the cost of such materials is shown separately in the general table.

Capital.—The census schedule required every operator to state the total amount of capital invested in the enterprise on the last day of the business year reported, as shown by his books. There is, however, a great diversity in the methods of bookkeeping in use by different operators. As a result, the statistics for capital lack uniformity. Some of the figures reported apparently represent capital stock at face value; others include large investments in mineral lands which are not at present being actively mined, but are held in reserve; still others may include expenditures for unproductive mining ventures in no way related to the operations carried on during the census year.

Persons engaged in mining industries.—The statistics of the number of operators and officials, clerks, and wage earners, are based on the returns for December 15, or the nearest representative day. The reported number of wage earners includes overseers and foremen performing work similar to that of the men over whom they have charge; those whose duties are wholly supervisory are classed as superintendents and managers. Because of the common practice of shutting down mines at frequent intervals, it is impossible to ascertain with any satisfactory degree of accuracy the average number of employees—that is, the number who, if continuously employed, would be required to produce the actual output of the year.

Value of products.—Statistics of the value of mineral products were obtained by the Bureau of the Census in cooperation with the United States Geological Survey, but the two bureaus follow different methods in presenting these statistics. The Geological Survey shows separately the value of each mineral product, whereas the Bureau of the Census presents the value of products of each mining industry. The value of products given for a mining industry often includes the value of some products not covered by the industry designation. The crude product of metalliferous mines may include varying combinations of metals, such as gold, silver, copper, lead, zinc, and iron. Similarly, the total value of all products of the granite quarries is not identical with the value of the total output of granite, but may include the value of some marble or other stone quarried in connection with the principal product.

The value of products for 1909 in most cases represents the value of the products marketed during that year, not the value of those mined during that year.

MINING IN VERMONT.

Summary.—Statistics for all mining enterprises in the state of Vermont are presented in Table 7, which gives statistics for all industries combined and for producing enterprises separately in all cases where the statistics could be given without disclosing the operations of an individual establishment. Statistics for nonproducing enterprises are also given separately from producing enterprises.

The total value of products of all mines and quarries in Vermont in 1909 amounted to \$8,221,323. Of this amount, marble, granite, and slate quarries contributed \$7,971,764, or 97 per cent. Other products of the mining industry, with a combined value of \$249,559, were: Talc and soapstone; clay (sold as such); limestone; mineral pigments; asbestos; and scythestones.

The total number of wage earners employed in the producing enterprises on December 15, 1909, was 8,388. Of this number, 8,113, or 96.7 per cent, were employed in the stone quarries.

Character of organization.—Table 1 classifies the producing mining operations of the state under form of organization, distinguishing corporations from individual owners and firms, while Table 2 gives further details for incorporated enterprises distinguished from those which are unincorporated. Out of a total of 137 operators, 57 were corporations. These corporations reported 82.2 per cent of the total value of products and employed 78.2 per cent of all wage earners. In the marble industry the classification of production according to forms of organization can not be given, since to do so would disclose the operations of individual enterprises. In the slate industry the share of corporations in the total production is not so great as in the granite industry or in all industries combined.

	1,522,410	290,827
Value of products.....	6,756,798	1,464,525

Size of enterprises.—In Table 3 the producing mining enterprises of the state are classified according to the number of wage earners employed. Of the 137 producing enterprises reported in 1909 there were only 17 which had in excess of 100 wage earners, but these enterprises reported 70.8 per cent of the total number of wage earners employed in all producing mining enterprises in the state. The proportion of wage earners employed by the larger enterprises is somewhat greater in marble quarries than in granite and slate quarries.

Over 100.....	7	13.0	1,336	51.8

Prevailing hours of labor.—In Table 4 all producing enterprises, except those which employed no wage earners or which were operated exclusively by contract work, have been classified according to the prevailing hours of labor per day in each enterprise. The table shows the percentage of the total number of enterprises falling into each group, and also a per cent distribution in which each enterprise has been given a weight according to the total number of wage earners employed December 15, 1909, or the nearest representative day. It should be borne in mind that this latter distribution does not show the exact proportion of the total number of wage earners working the specified number of hours per day, since in some cases a part of the employees worked a greater or less number of hours than those generally prevailing in the enterprise. In nearly one-half of all the enterprises 10 hours per day were the prevailing hours of labor, and the enterprises in which these hours are found employ somewhat over two-thirds of all the wage earners reported.

Table 4

INDUSTRY AND HOURS PER DAY.	PRODUCING ENTERPRISES: 1909

10 hours.....	38	70.4	77.0

¹ Exclusive of 1 granite quarry for which number of hours was not reported.

Engines and power.—The aggregate horsepower employed in producing enterprises, as shown in Table 5, was 25,668, of which 23,590 horsepower was developed by engines and water wheels owned by the enterprises using them, and 2,078 by electric motors operated by purchased current.

Comparison of mining industries: 1902-1909.—In order to make comparisons between 1909 and 1902 it is necessary to include for 1909 figures for the production of lime, which were included in the report on mines and quarries for 1902, but classified as a manufacturing industry in 1909. In any case only the few items specified in Table 6 can be compared for the two years.

Table 6

	PRODUCING ENTERPRISES.		
	1909	1902	Per cent of increase. ¹
Wages and salaries.....	\$4,899,736	\$3,490,476	40.4
Supplies and materials.....	\$1,386,827	\$1,076,143	28.9
Royalties and rent of mines.....	\$85,632	\$101,546	-15.7
Contract work.....	\$64,988
Value of products.....	\$8,471,725	\$5,004,705	43.5
Primary horsepower.....	25,916	14,079	73.0

¹ A minus sign (—) denotes decrease.

Duplication between manufactures and mining.—In a number of industries some of the operators subjected the products obtained to certain manufacturing processes on the premises before marketing. Such enterprises have been included in the statistics both for manufactures and for mining. As a result of this fact the combined value of products for manufacturing and mining industries in Vermont involves a duplication of \$6,699,723.

DETAILED STATISTICS FOR MINING INDUSTRIES: 1909.
